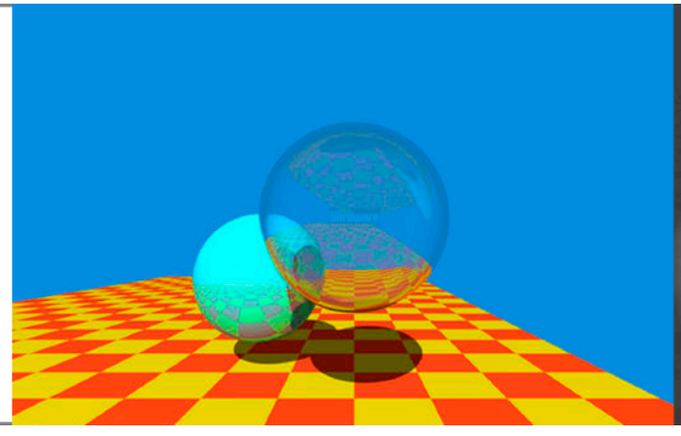
Introduction to Computer Graphics

GAMES101, Lingqi Yan, UC Santa Barbara

Lecture 9:
Shading 3 (Texture Mapping cont.)



http://www.cs.ucsb.edu/~lingqi/teaching/games101.html

Announcements

- About homework
  - Homework 1 is being graded
  - Homework 2
    - 271 submissions so far
  - Homework 3 will be released soon

Last Lectures

- Shading 1 & 2
  - Blinn-Phong reflectance model
  - Shading models / frequencies
  - Graphics Pipeline
  - Texture mapping

Today

- Shading 3
  - Barycentric coordinates
  - Texture queries
  - Applications of textures
- Shadow mapping

Interpolation Across Triangles: Barycentric Coordinates

(重心坐标)

Interpolation Across Triangles

Why do we want to interpolate?

- Specify values **at vertices**
- Obtain smoothly varying values **across triangles**

What do we want to interpolate?

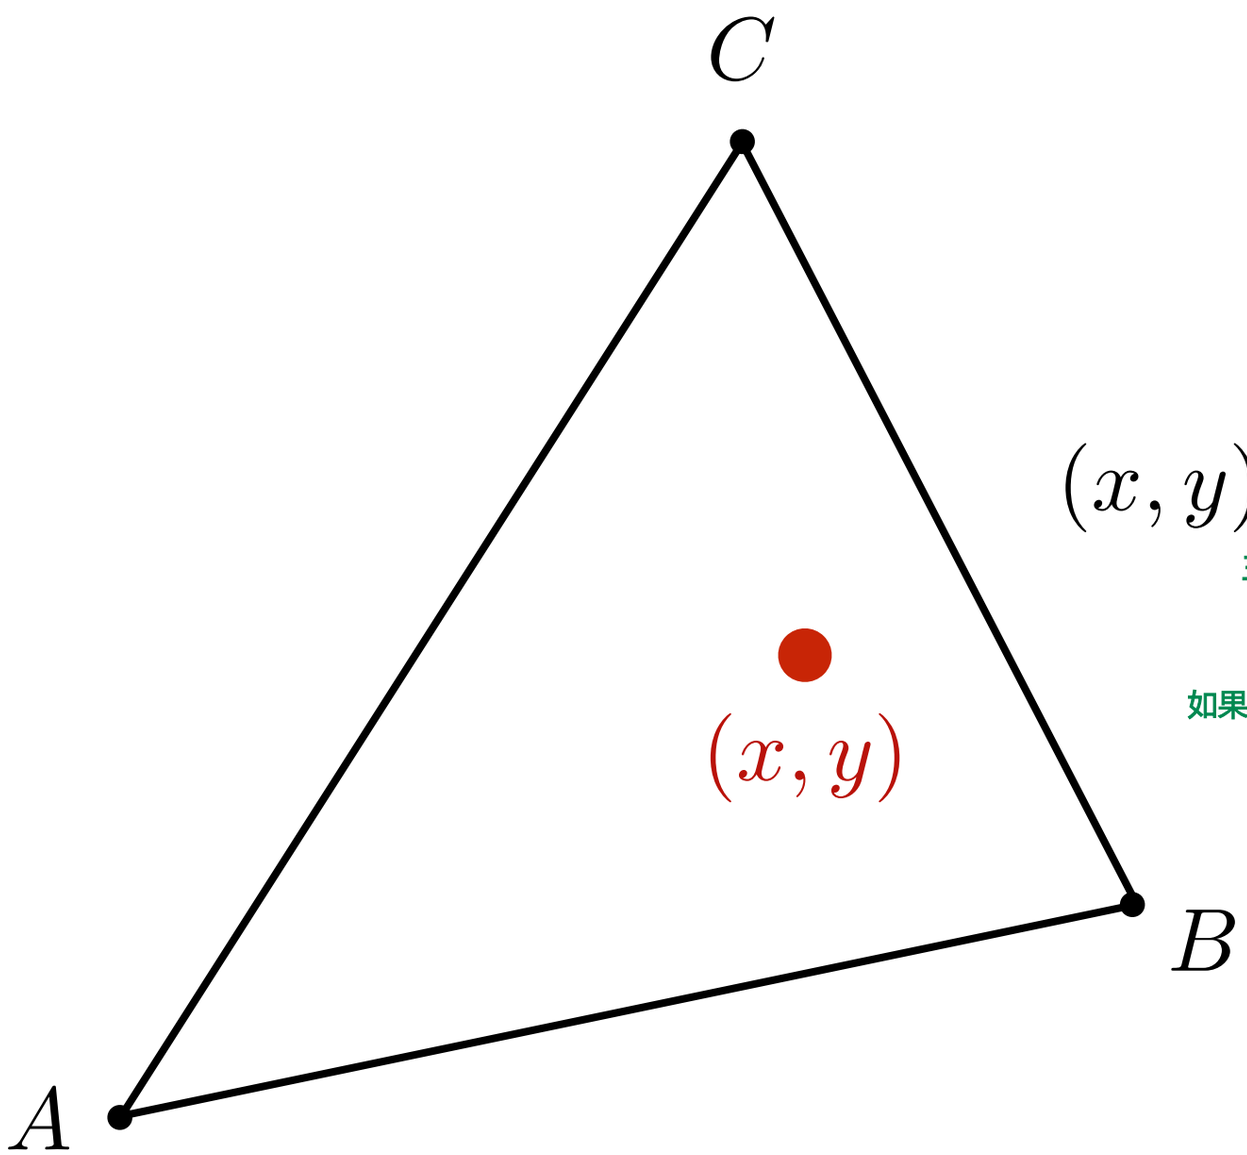
- Texture coordinates, colors, normal vectors, …

How do we interpolate?

- **Barycentric coordinates**

Barycentric Coordinates

A coordinate system for triangles (α, β, γ)



$$(x, y) = \alpha\, A + \beta\, B + \gamma\, C$$

三个系数之和等于1，为了限制点在三角形内（结论）

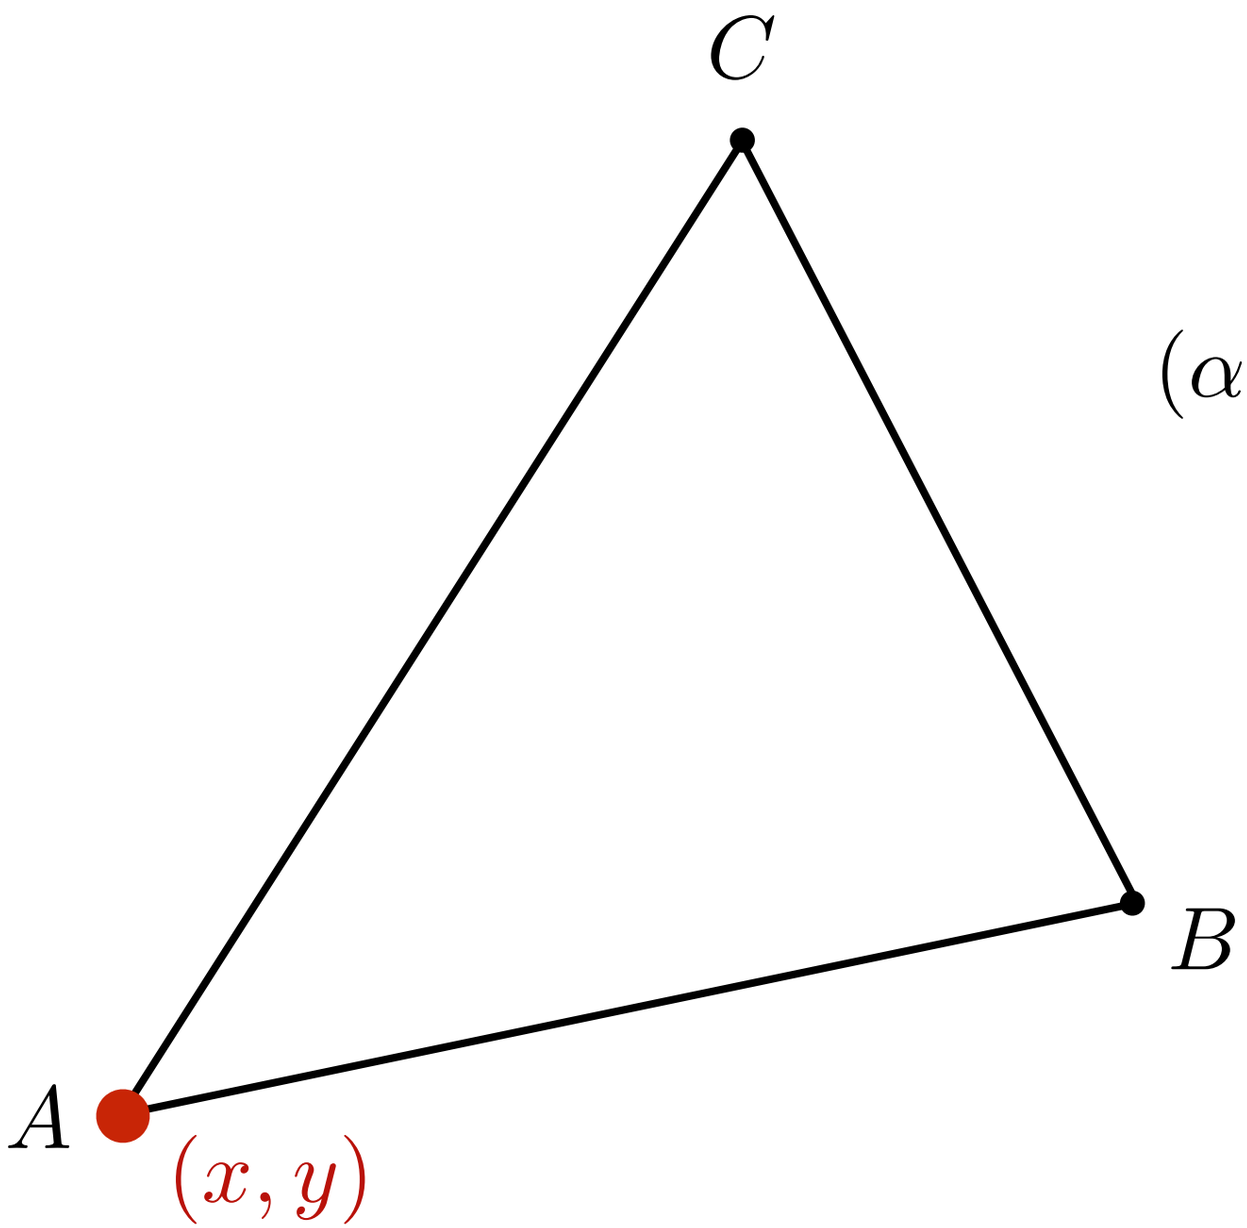
$$\alpha + \beta + \gamma = 1$$

如果要满足这个点在三角形内，必须满足这三个系数大于等于0

Inside the triangle if all three coordinates are non-negative

Barycentric Coordinates

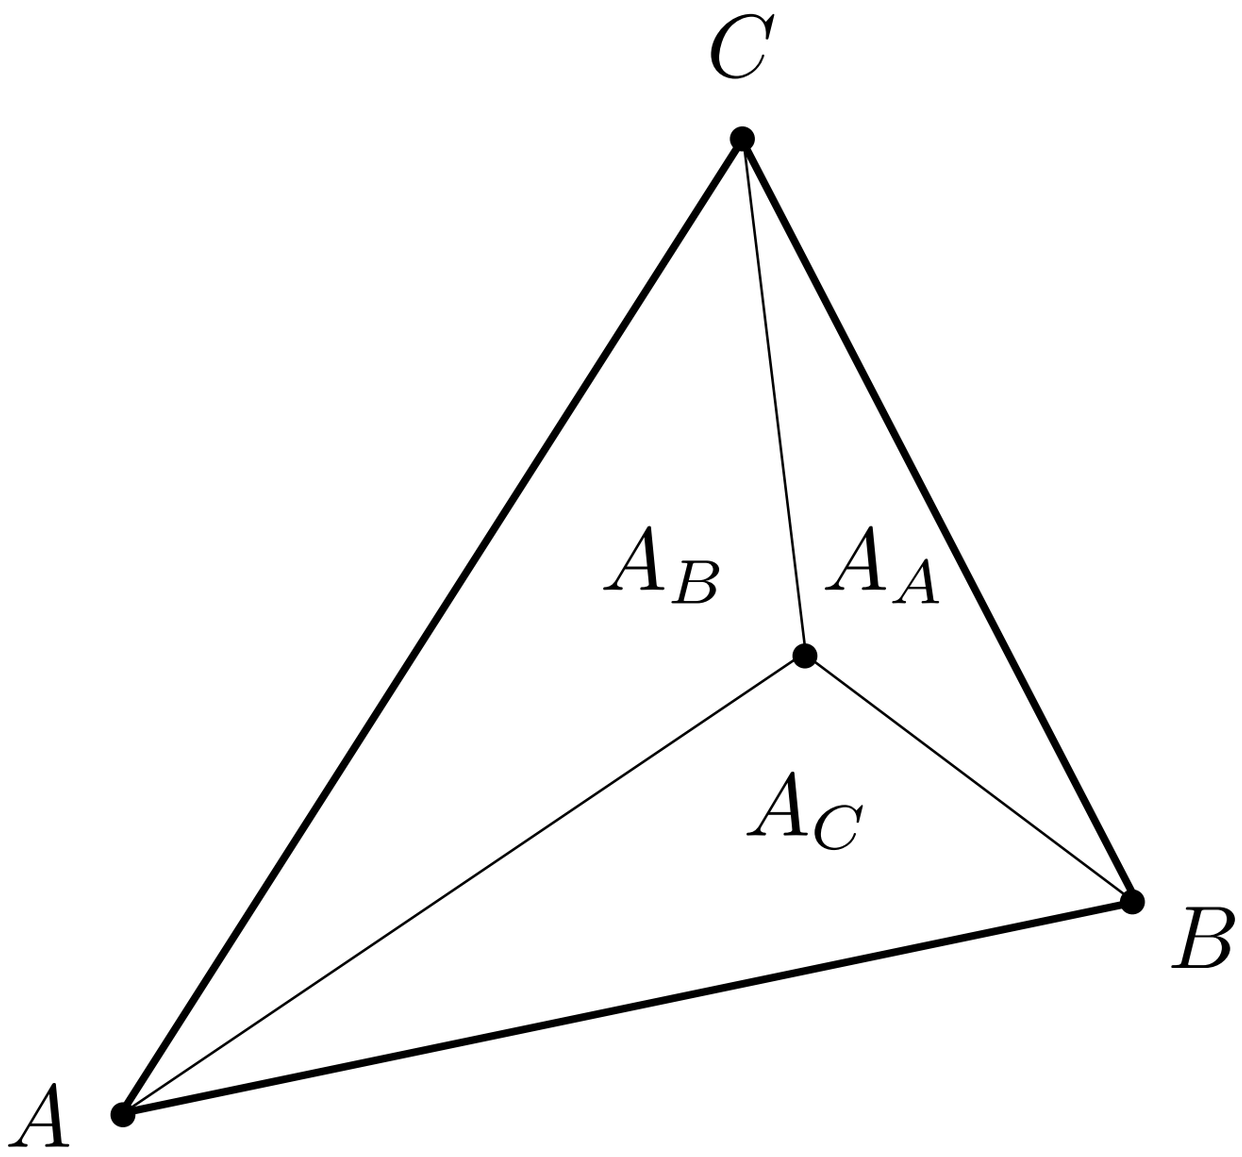
What's the barycentric coordinate of A?



$$(\alpha, \beta, \gamma) = (1, 0, 0)$$
$$(x, y) = \alpha\, A + \beta\, B + \gamma\, C$$
$$= A$$

Barycentric Coordinates

Geometric viewpoint — proportional areas



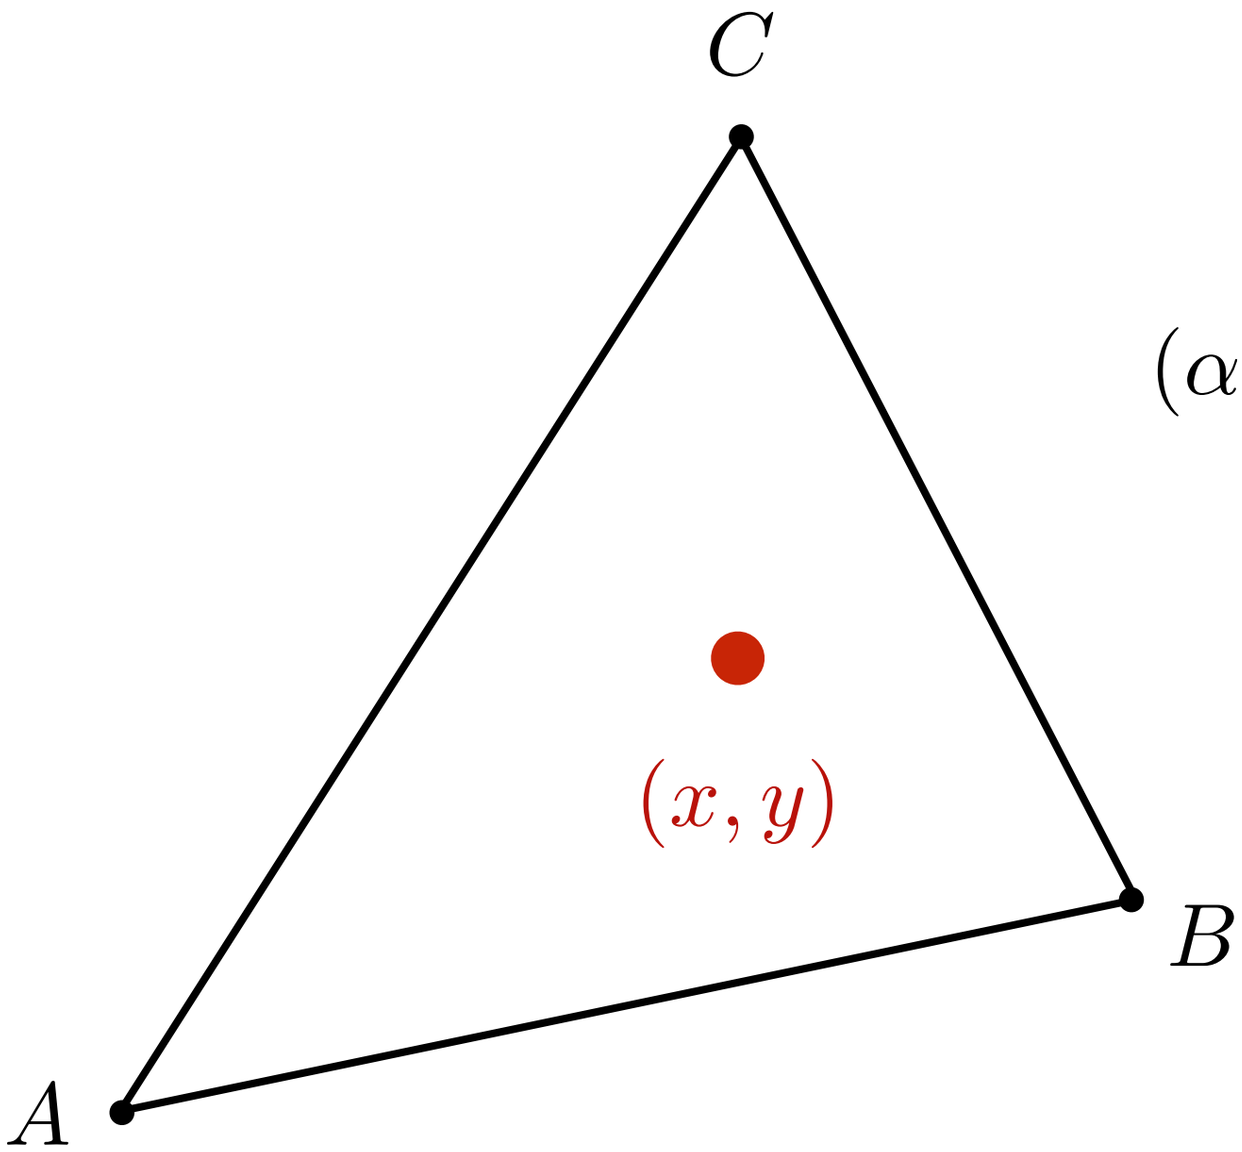
$$\alpha = \frac{A_A}{A_A + A_B + A_C}$$

$$\beta = \frac{A_B}{A_A + A_B + A_C}$$

$$\gamma = \frac{A_C}{A_A + A_B + A_C}$$

Barycentric Coordinates

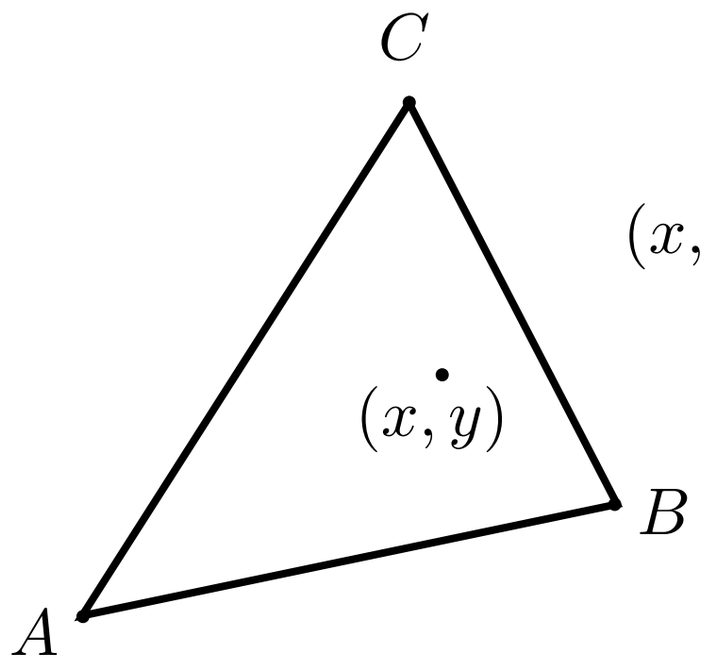
What's the barycentric coordinate of the centroid?



$$(\alpha, \beta, \gamma) = \left(\tfrac{1}{3}, \tfrac{1}{3}, \tfrac{1}{3}\right)$$

$$(x, y) = \tfrac{1}{3}\,A + \tfrac{1}{3}\,B + \tfrac{1}{3}\,C$$

Barycentric Coordinates: Formulas



$$(x, y) = \alpha\, A + \beta\, B + \gamma\, C$$

$$\alpha + \beta + \gamma = 1$$

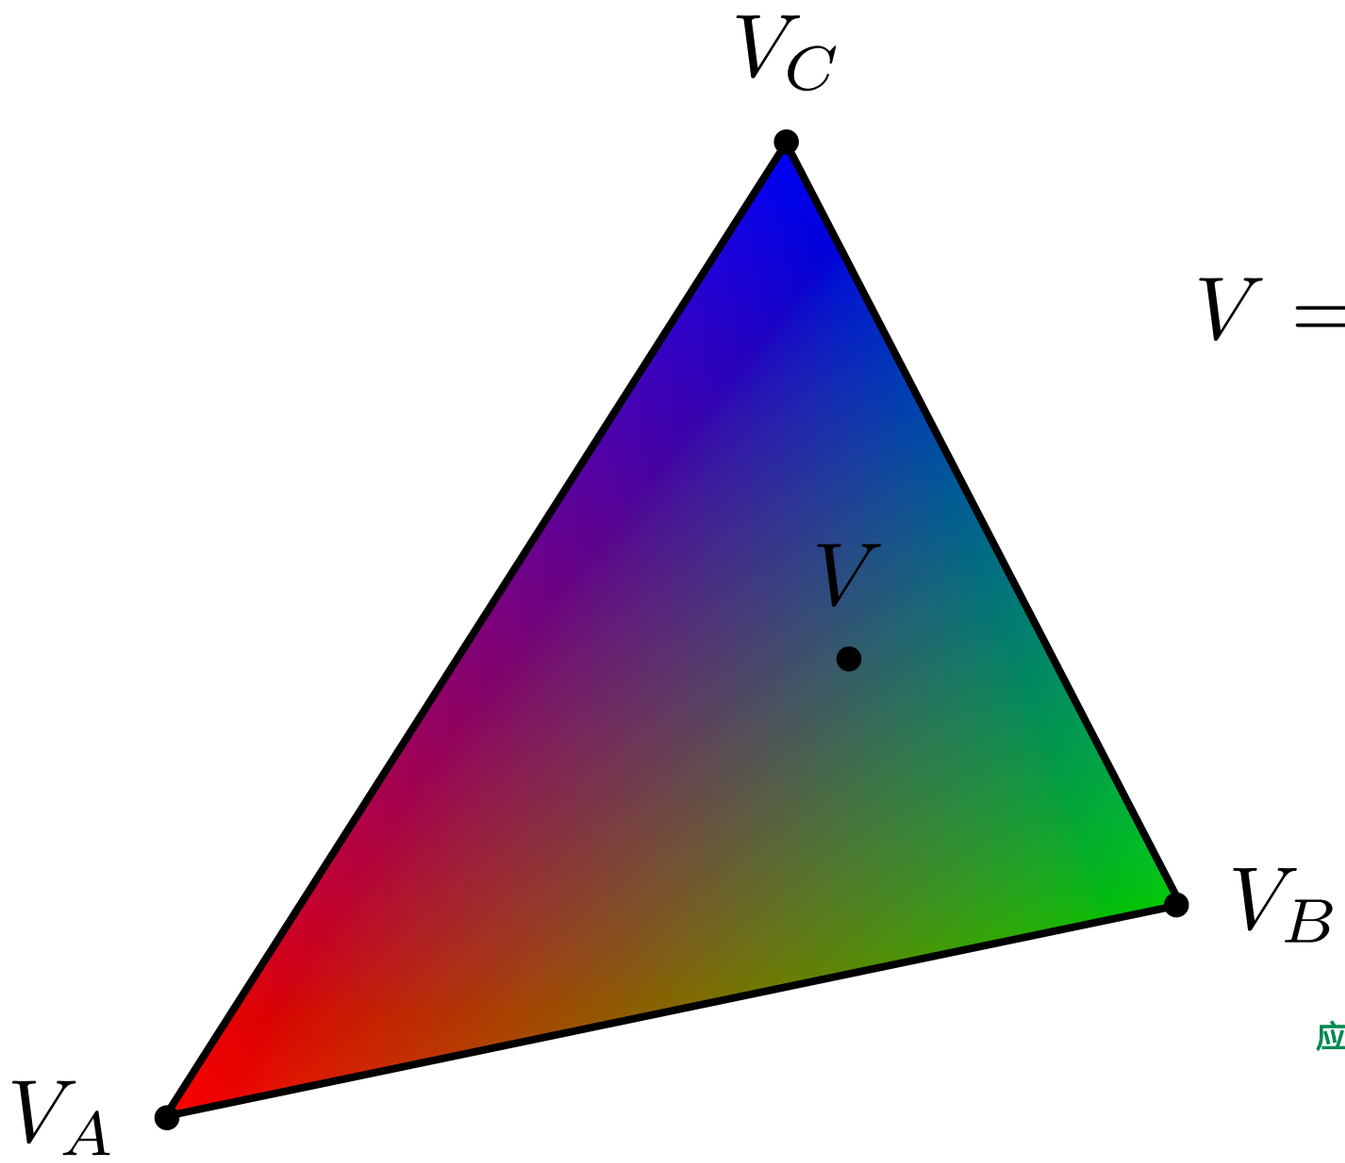
$$\alpha = \frac{-(x - x_B)(y_C - y_B) + (y - y_B)(x_C - x_B)}{-(x_A - x_B)(y_C - y_B) + (y_A - y_B)(x_C - x_B)}$$

$$\beta = \frac{-(x - x_C)(y_A - y_C) + (y - y_C)(x_A - x_C)}{-(x_B - x_C)(y_A - y_C) + (y_B - y_C)(x_A - x_C)}$$

$$\gamma = 1 - \alpha - \beta$$

Using Barycentric Coordinates

Linearly interpolate values at vertices



$$V = \alpha V_A + \beta V_B + \gamma V_C$$

V_A, V_B, V_C can be positions, texture coordinates, color, normal, depth, material attributes…

应该在三维空间中做插值，而不是投影空间中

However, barycentric coordinates are not invariant under projection!

Applying Textures

Simple Texture Mapping: Diffuse Color

Usually a pixel's center

for each rasterized screen sample (x,y):

(u,v) = evaluate texture coordinate at (x,y)

texcolor = texture.sample(u,v);

set sample's color to texcolor;

Using barycentric coordinates!

Usually the diffuse albedo Kd
(recall the Blinn-Phong reflectance model)

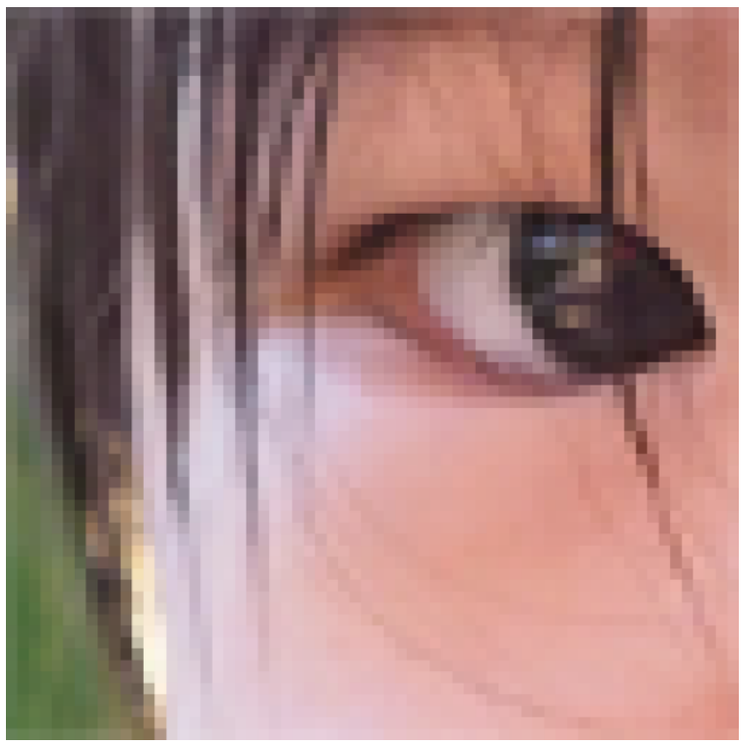
Texture Magnification

(What if the texture is too small?)

Texture Magnification - Easy Case

Generally don’t want this — insufficient texture resolution

A pixel on a texture — a **texel** (纹理元素、纹素)

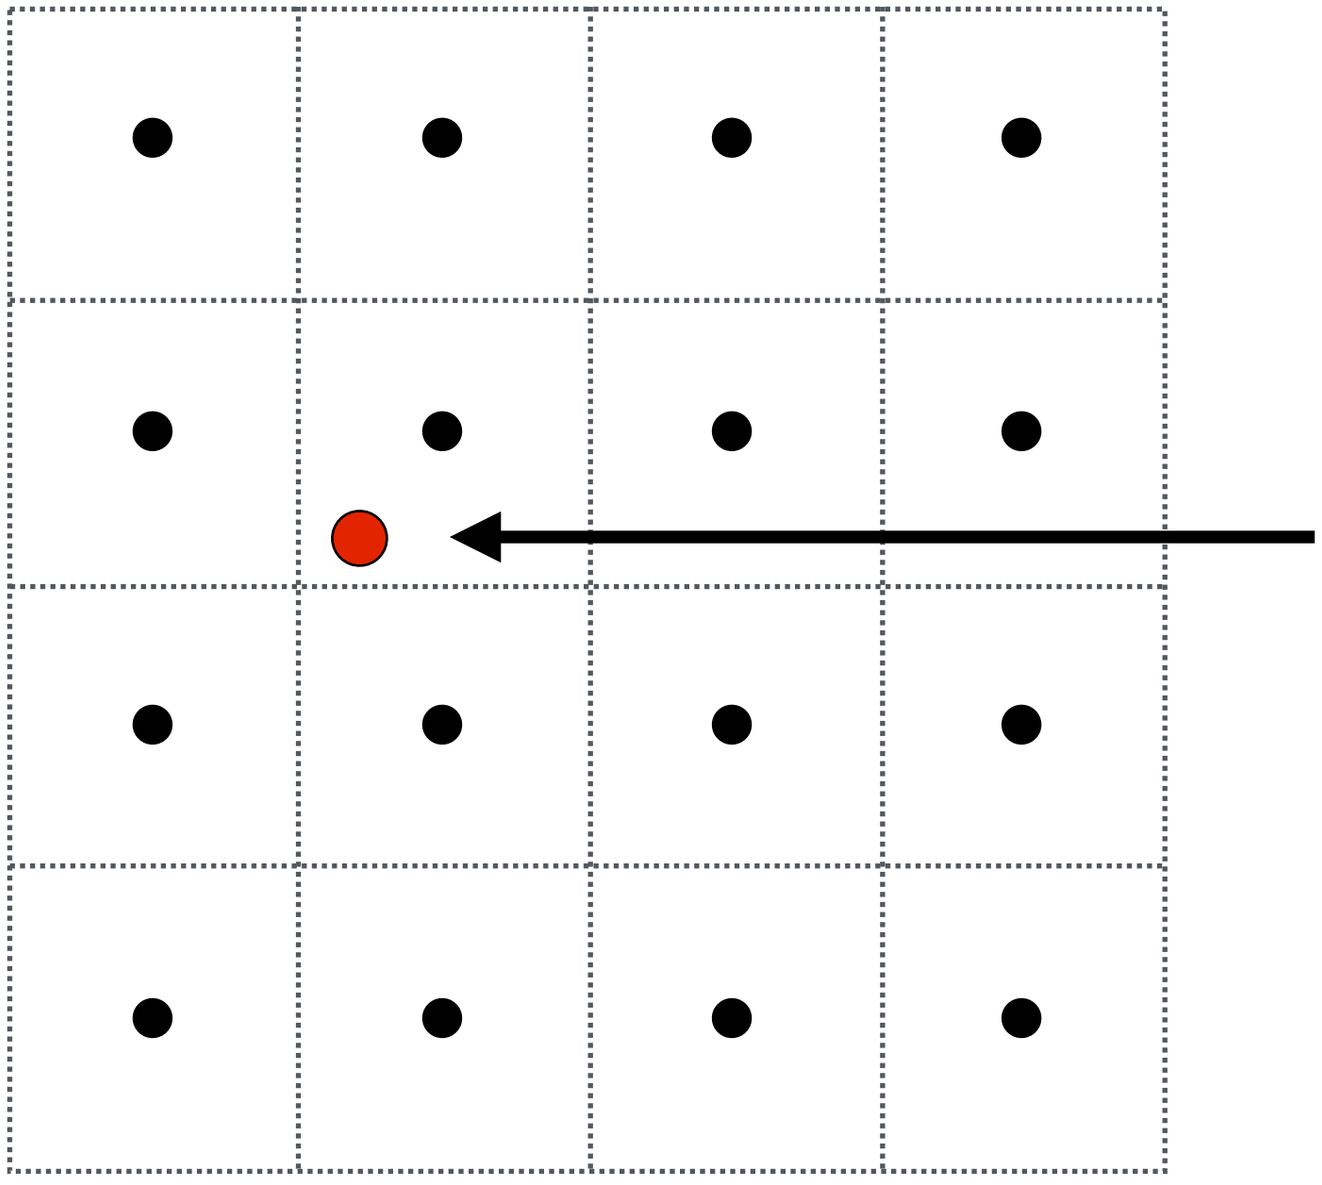


Nearest

Bilinear

Bicubic

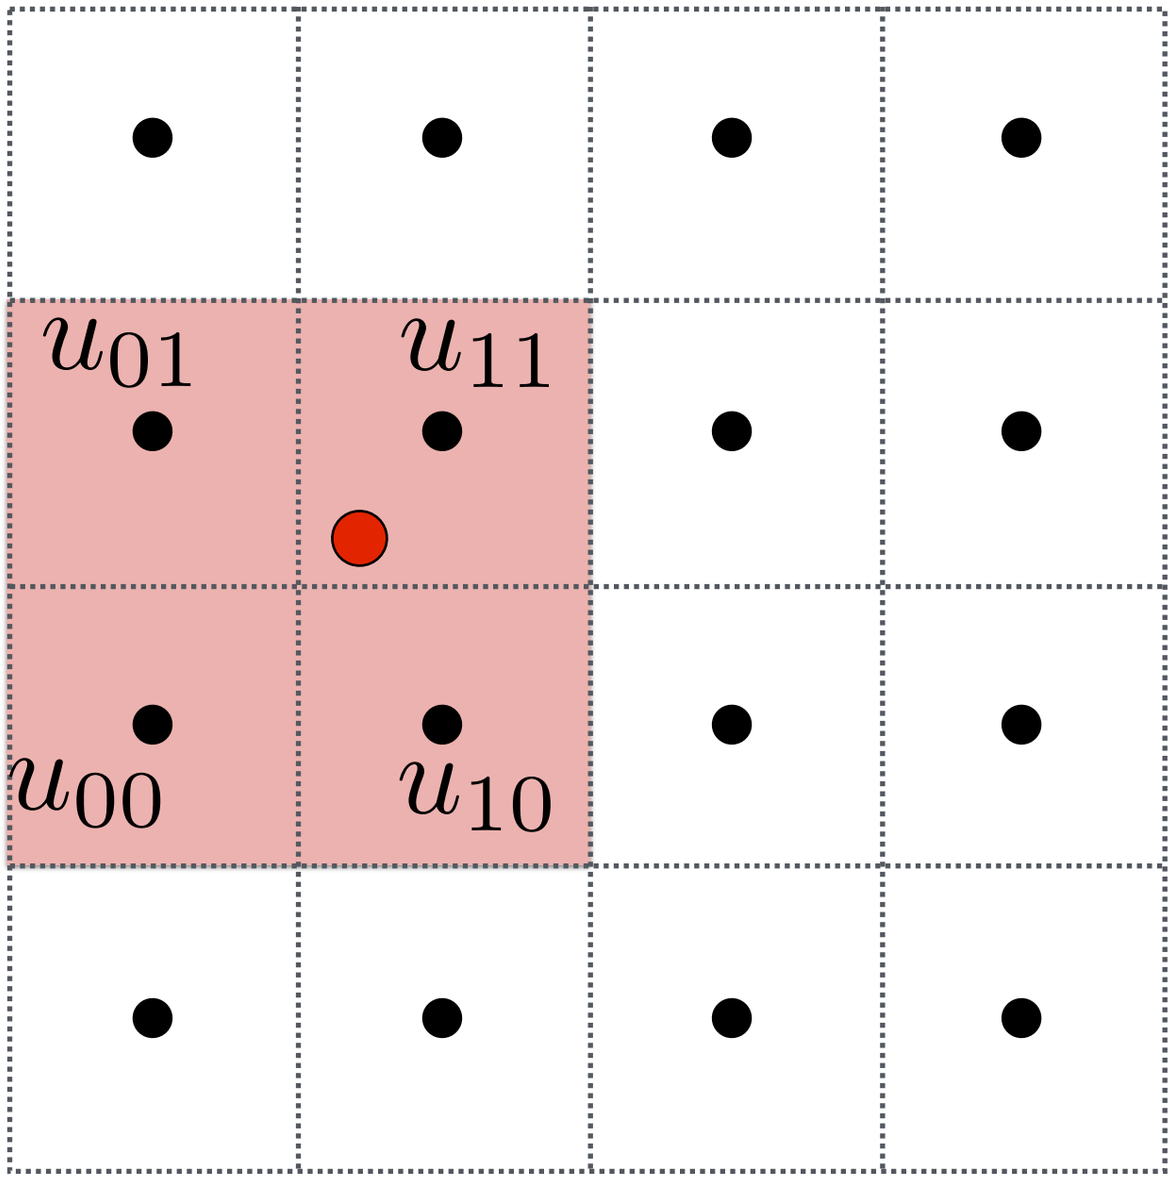
Bilinear Interpolation



Want to sample texture value f(x,y) at red point

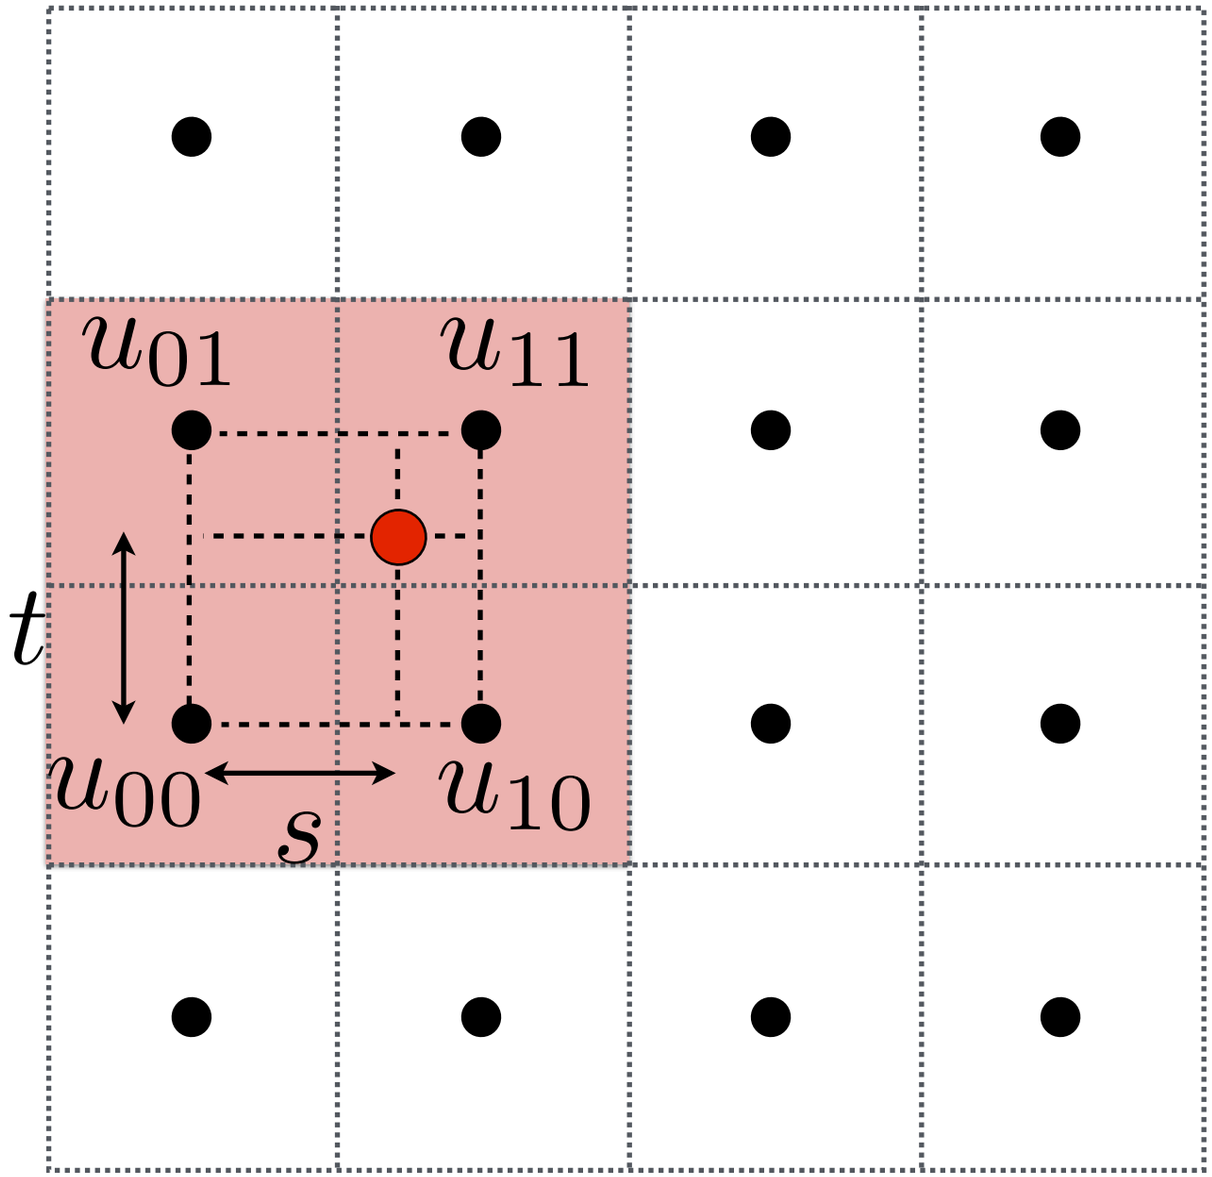
Black points indicate texture sample locations

Bilinear Interpolation



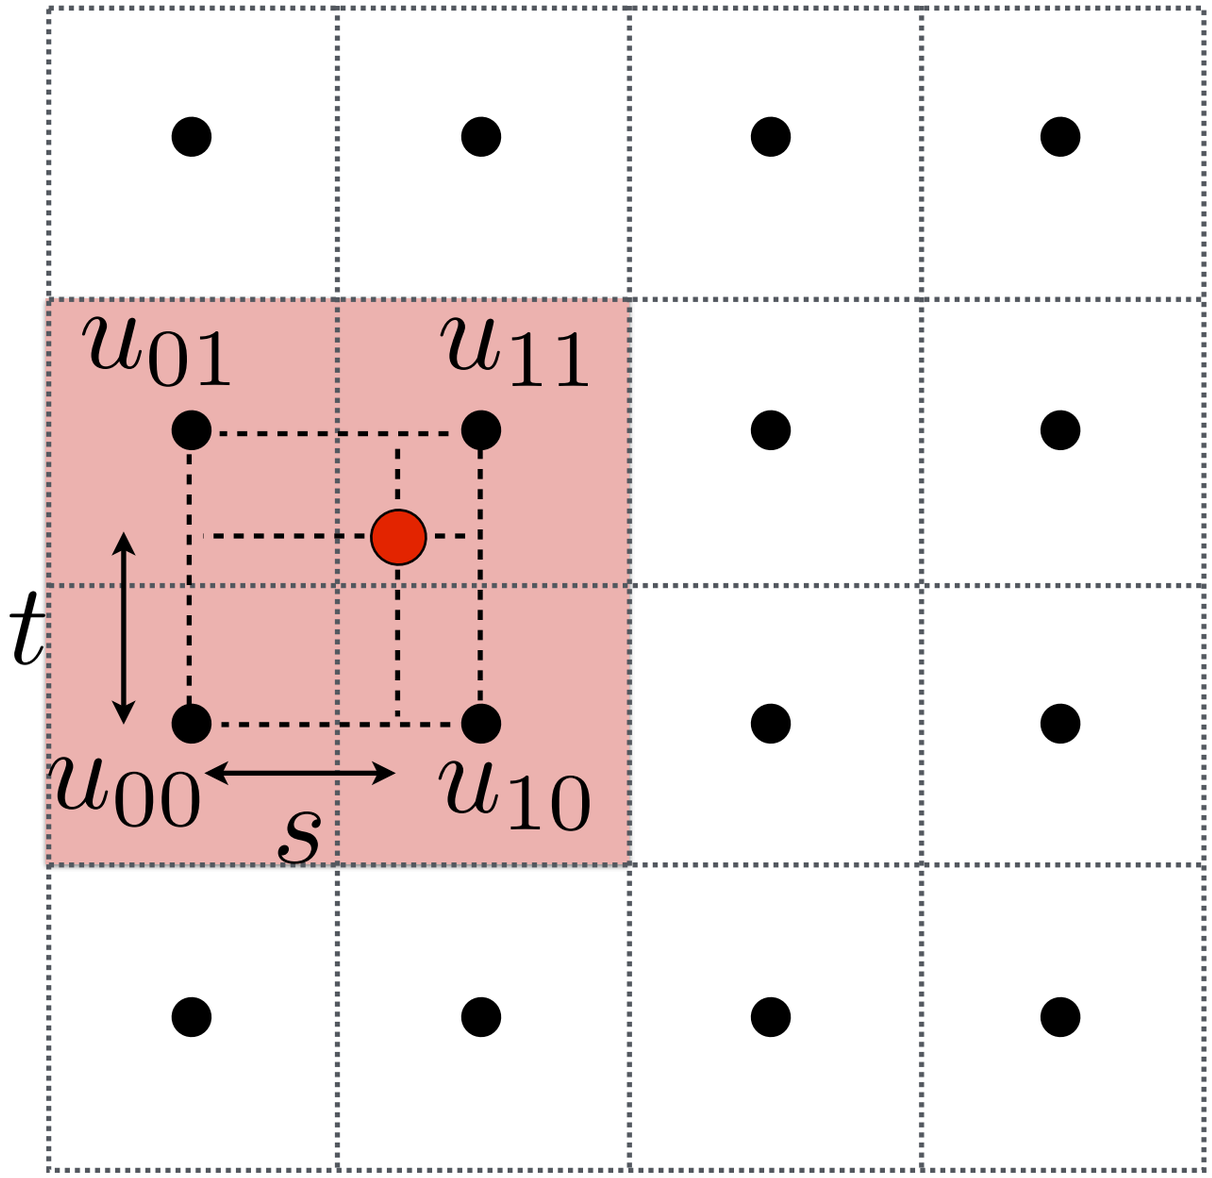
Take 4 nearest sample locations, with texture values as labeled.

Bilinear Interpolation



And fractional offsets, (s,t) as shown

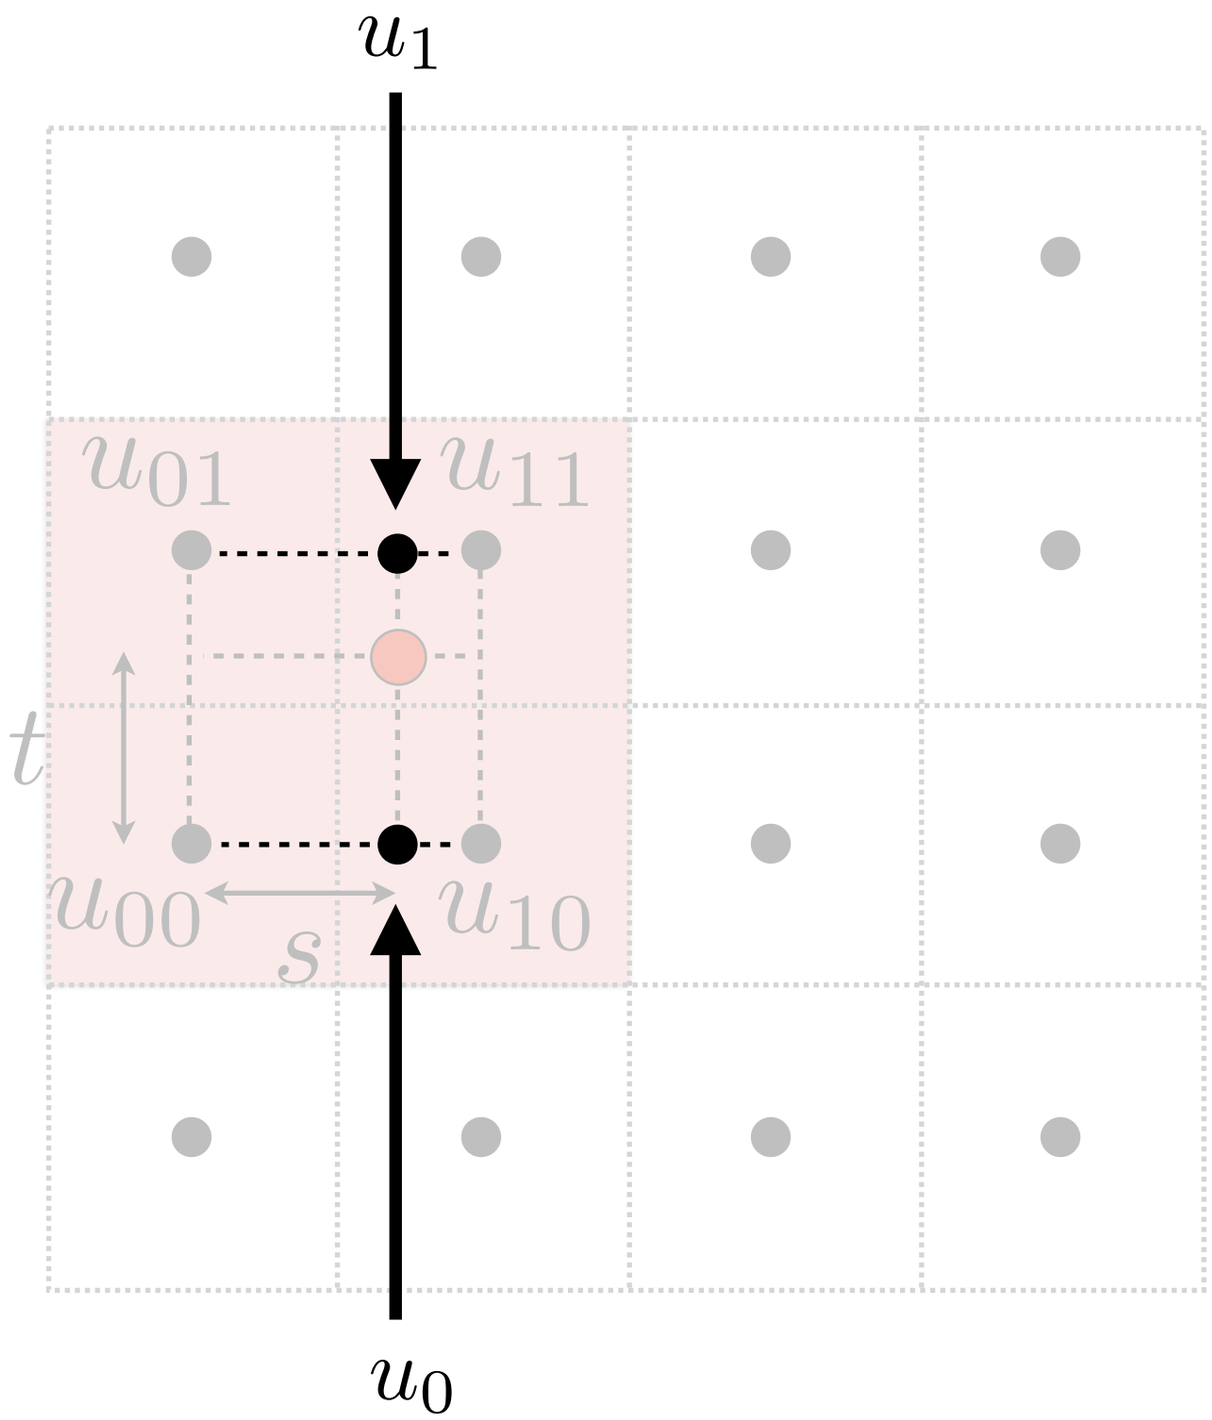
Bilinear Interpolation



Linear interpolation (1D)

$$\text{lerp}(x, v_0, v_1) = v_0 + x(v_1 - v_0)$$

Bilinear Interpolation



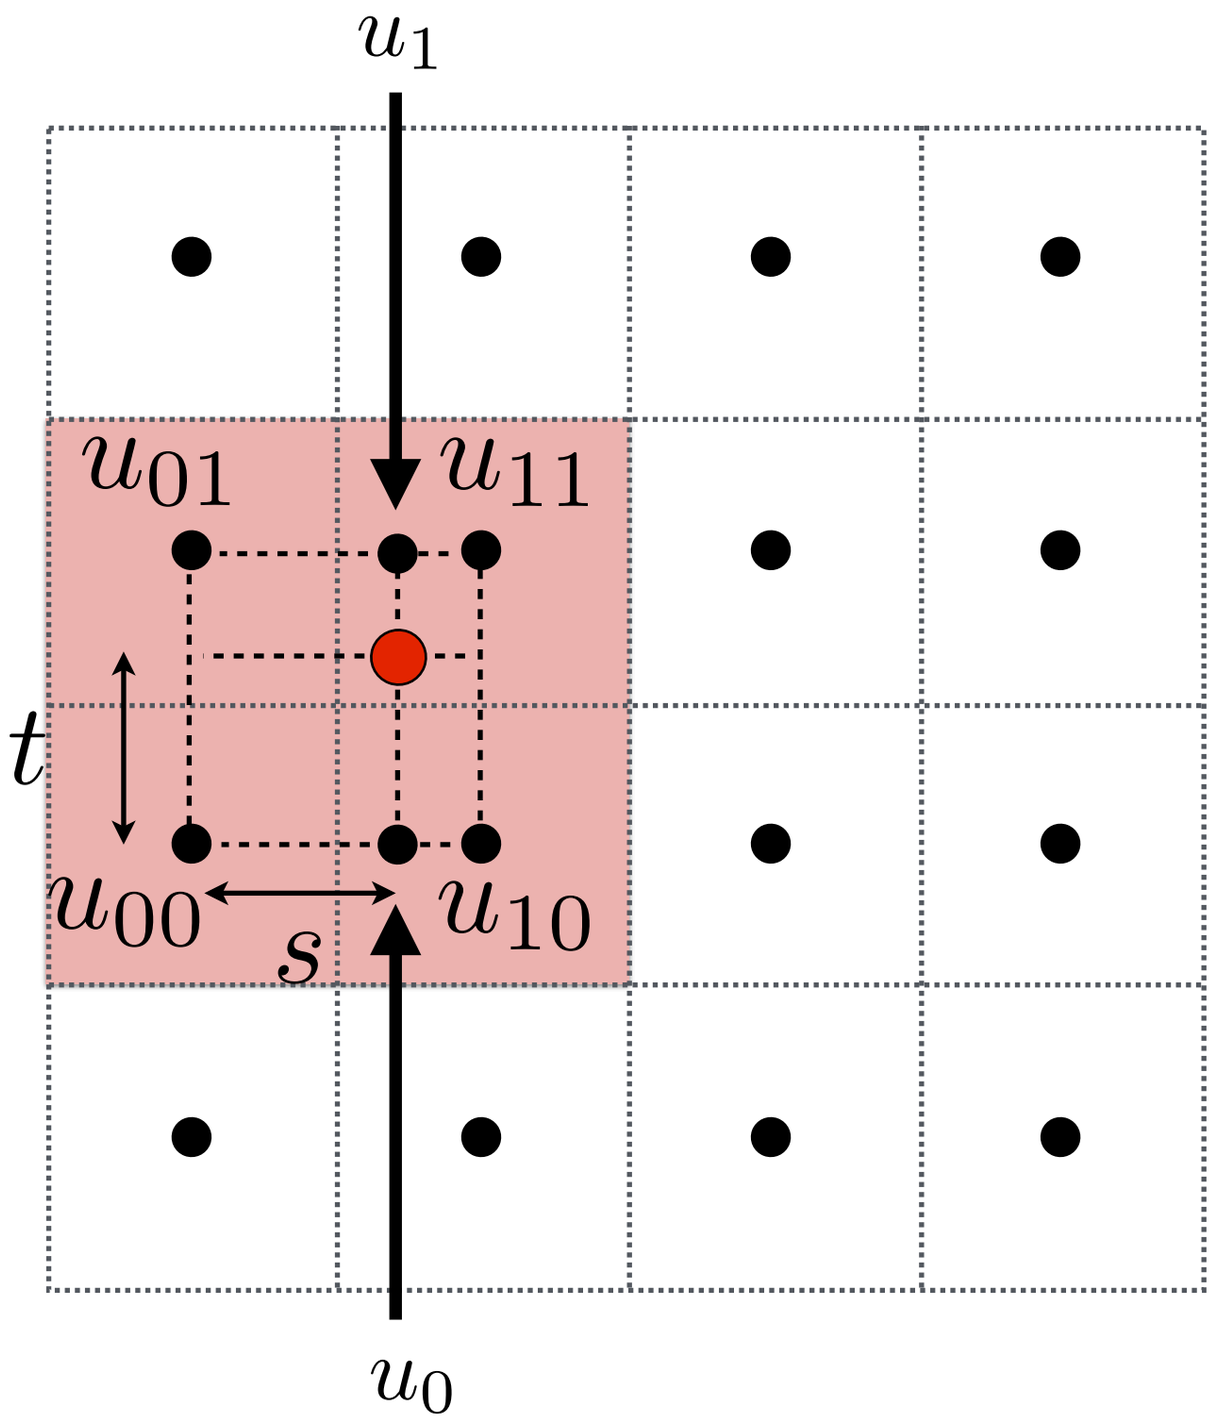
Linear interpolation (1D)

$$\text{lerp}(x, v_0, v_1) = v_0 + x(v_1 - v_0)$$

Two helper lerps (horizontal)

$$u_0 = \text{lerp}(s, u_{00}, u_{10})$$
$$u_1 = \text{lerp}(s, u_{01}, u_{11})$$

Bilinear Interpolation



Linear interpolation (1D)

$$\text{lerp}(x, v_0, v_1) = v_0 + x(v_1 - v_0)$$

Two helper lerps

$$u_0 = \text{lerp}(s, u_{00}, u_{10})$$

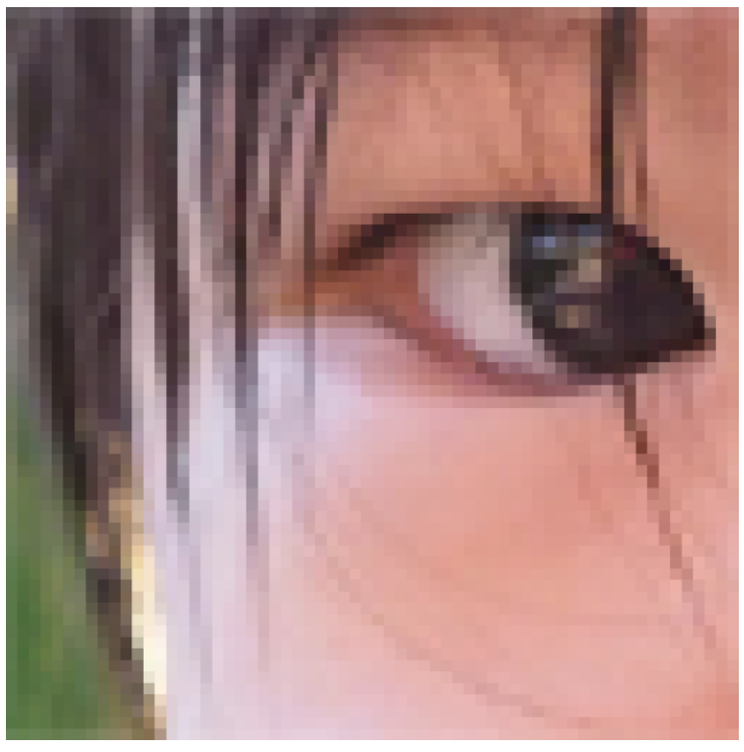
$$u_1 = \text{lerp}(s, u_{01}, u_{11})$$

Final vertical lerp, to get result:

$$f(x, y) = \text{lerp}(t, u_0, u_1)$$

Texture Magnification - Easy Case

Bilinear interpolation usually gives pretty good results at reasonable costs



Nearest

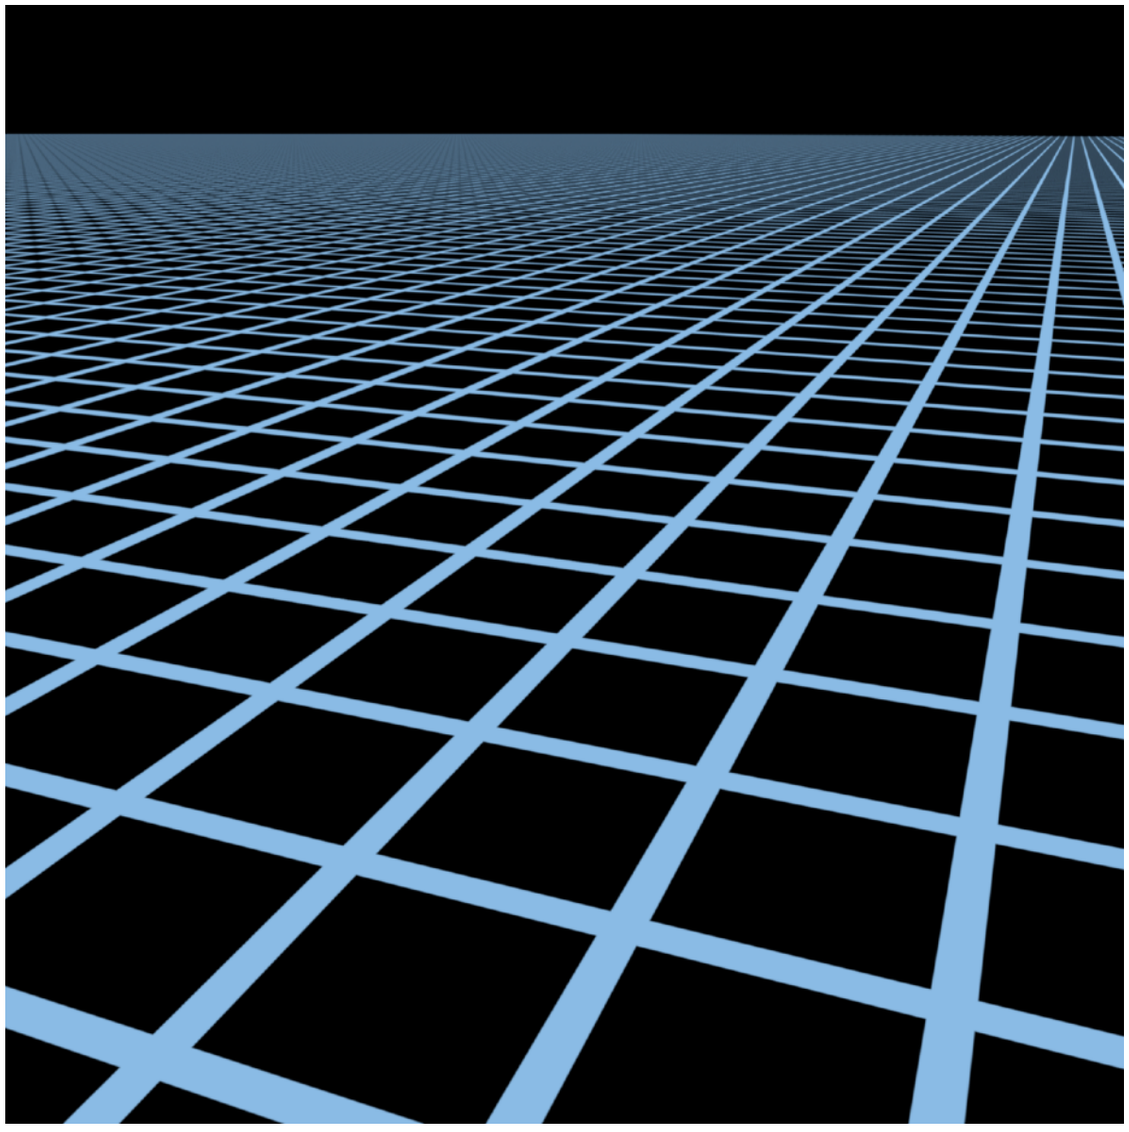
Bilinear

Bicubic

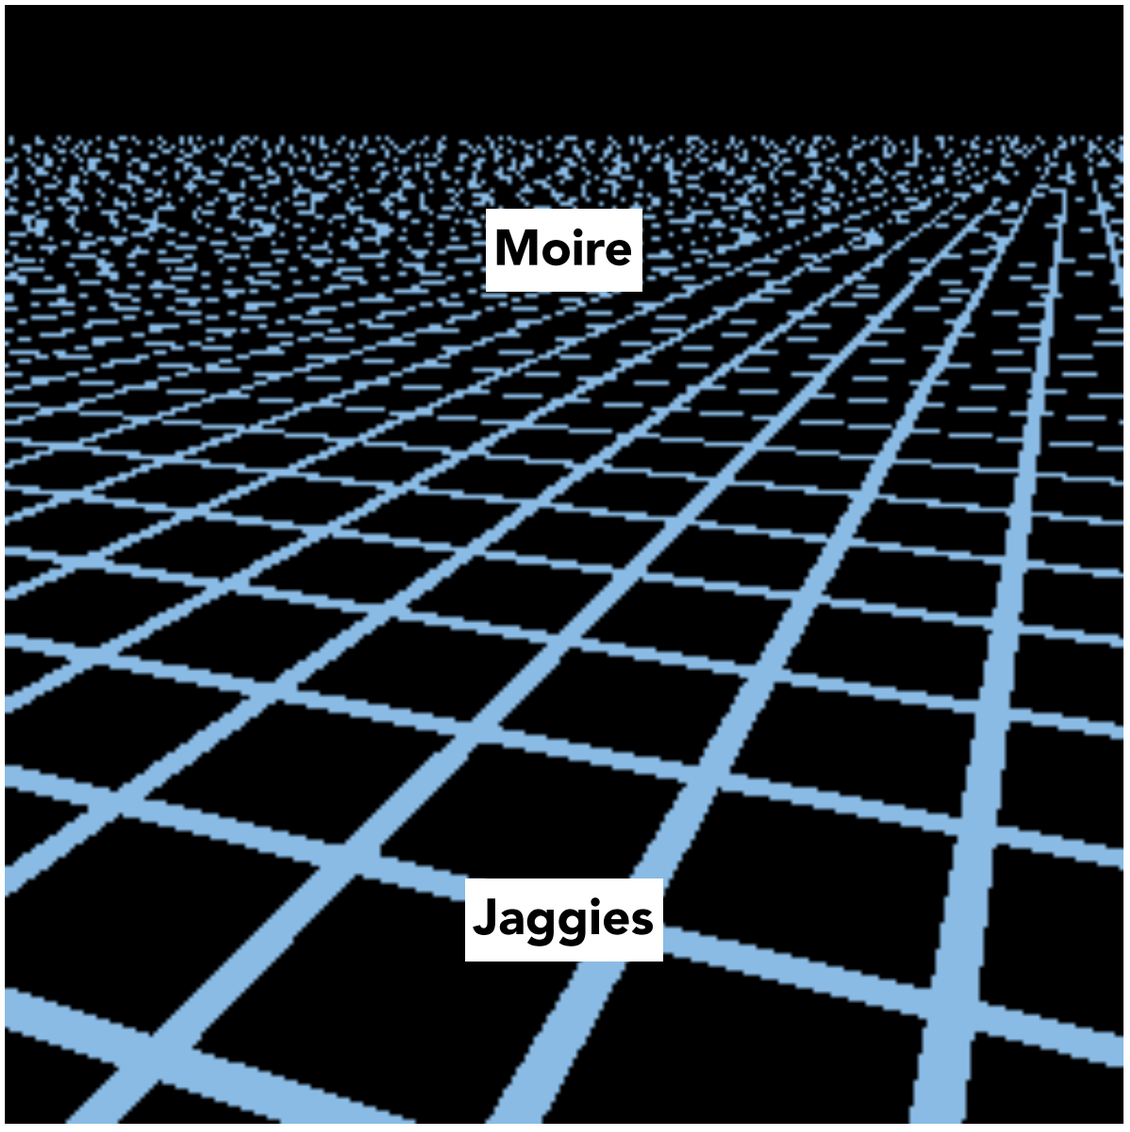
Texture Magnification **(hard case)**

(What if the texture is too large?)

Point Sampling Textures — Problem

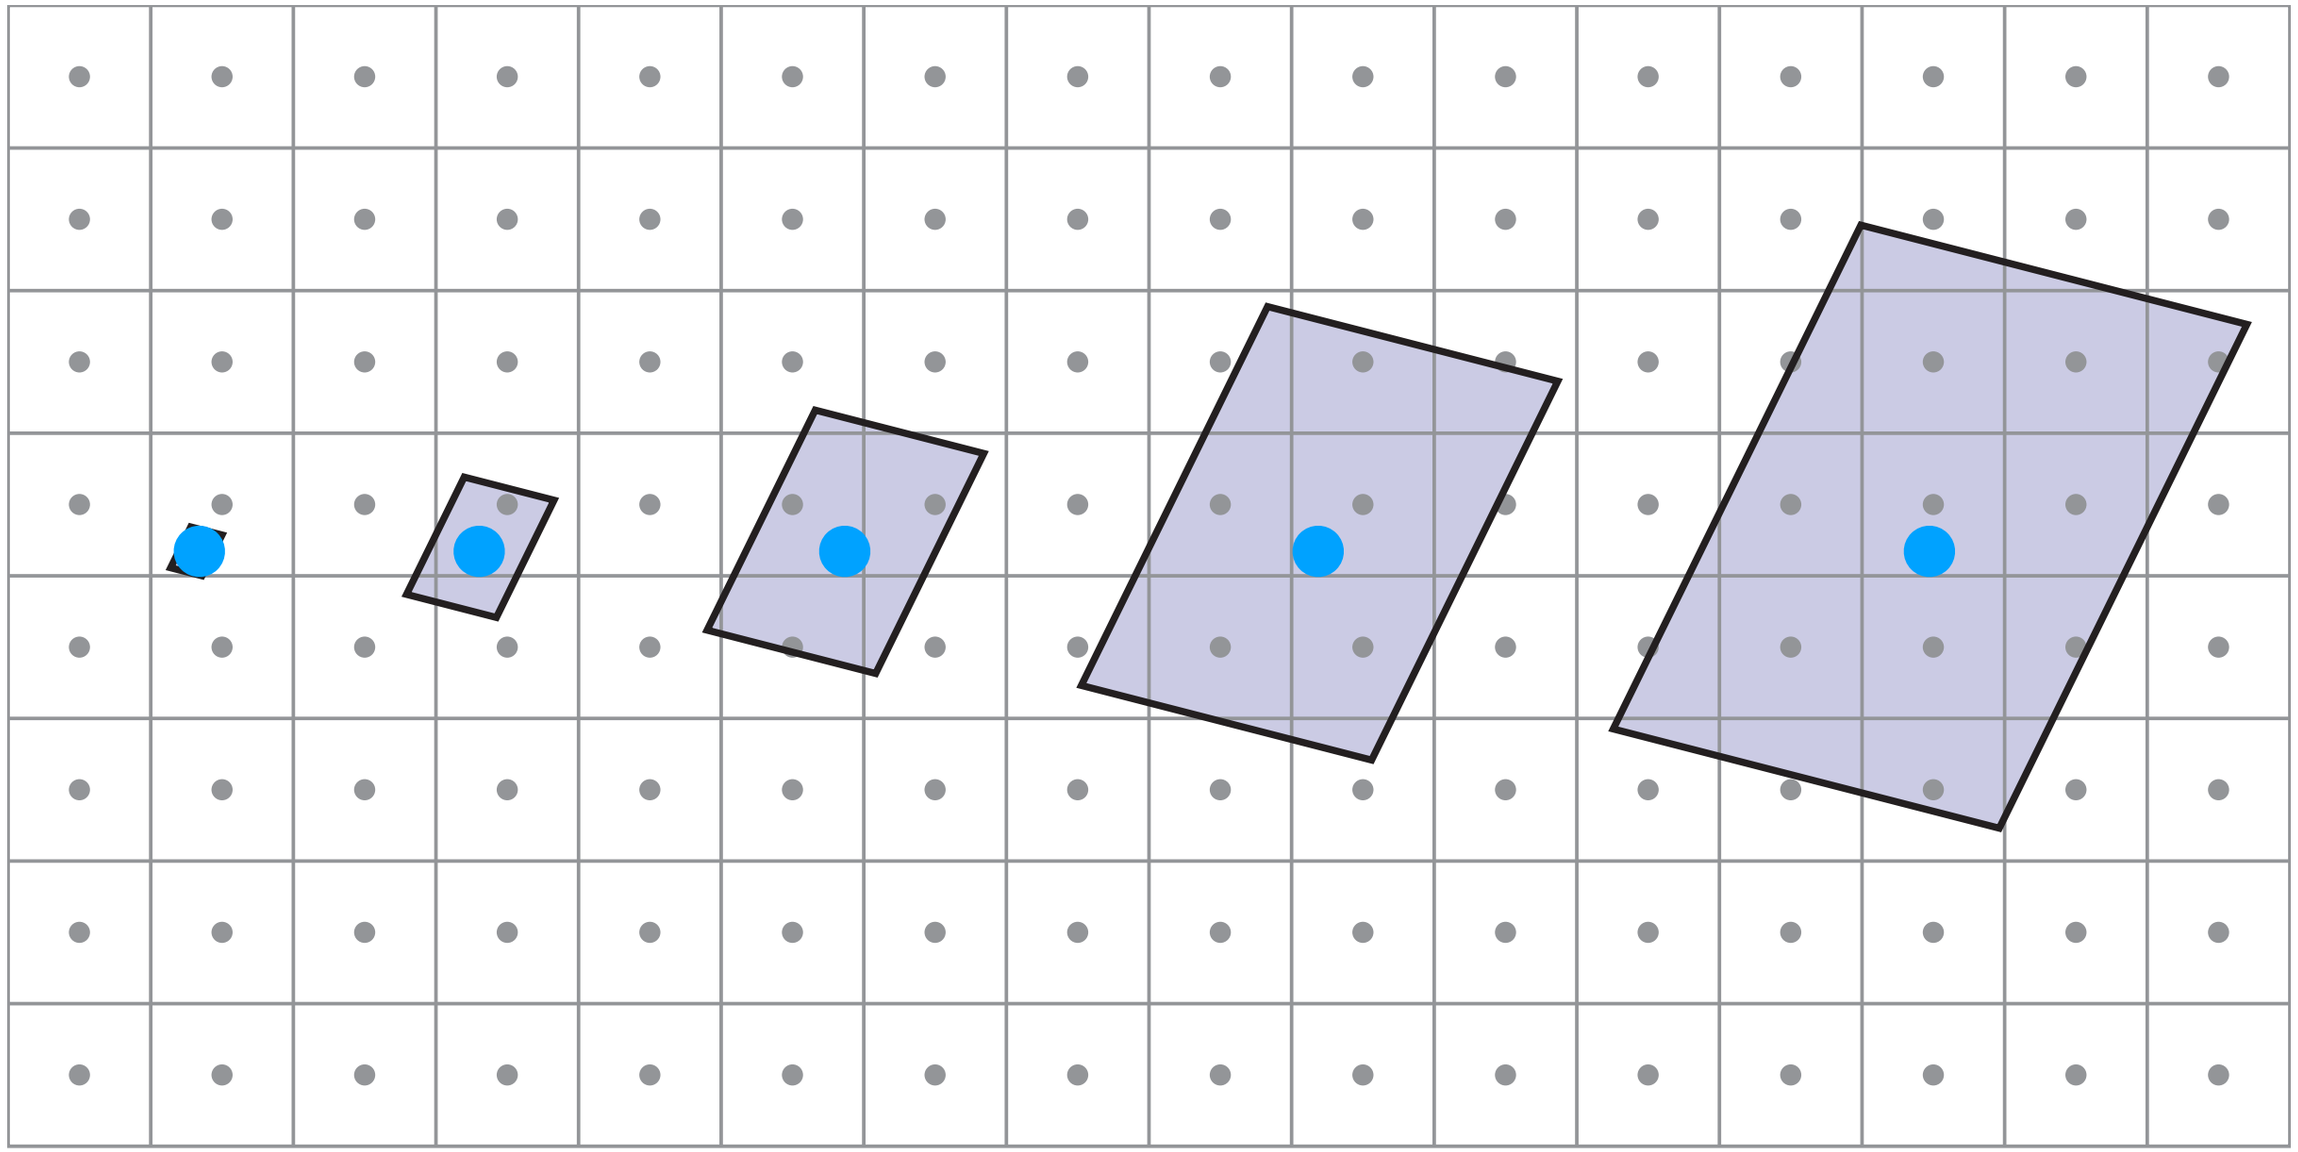


Reference



Point sampled

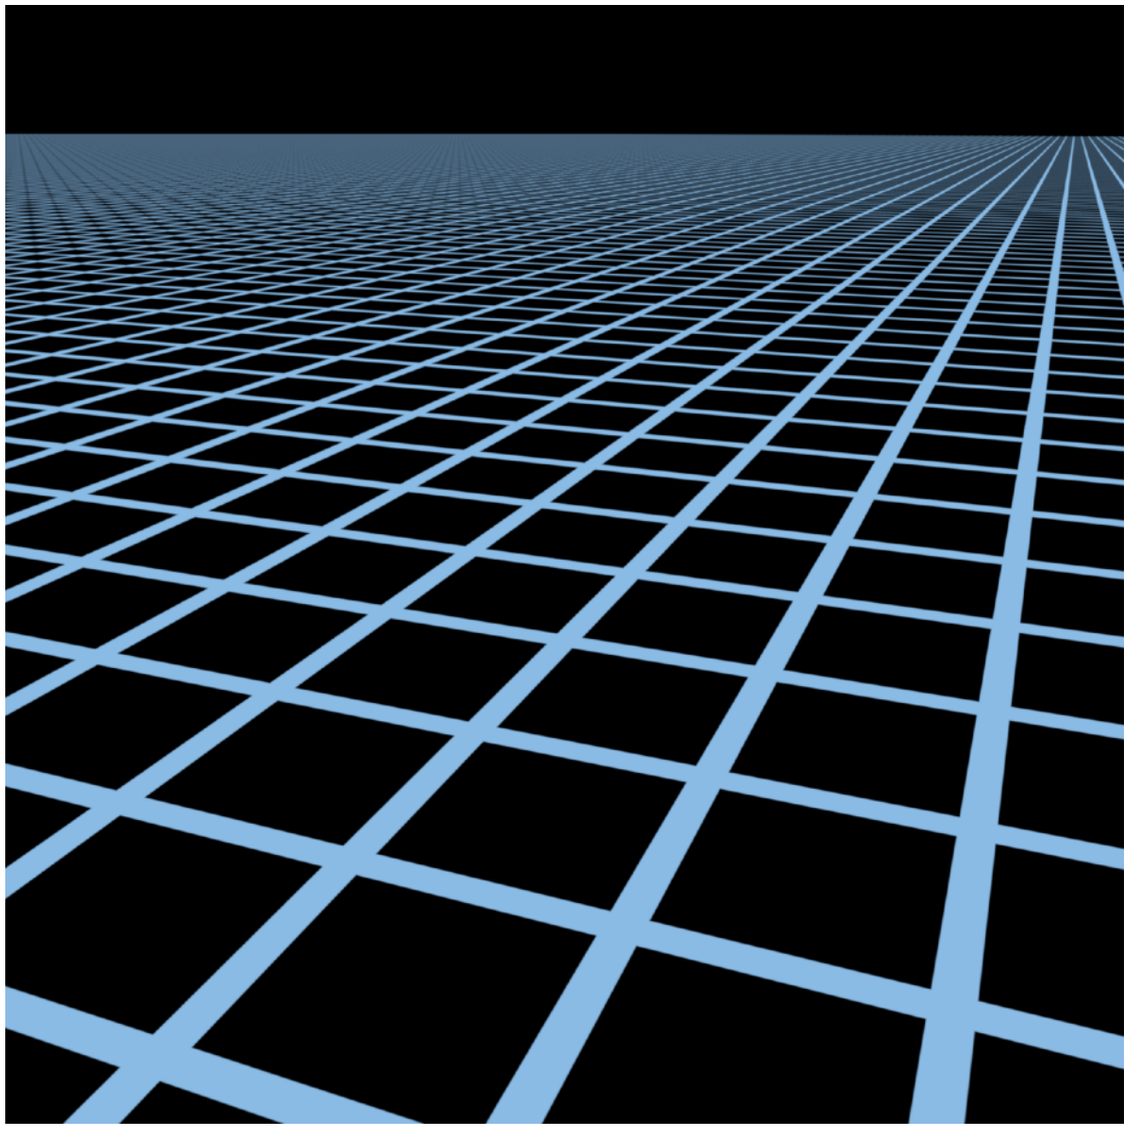
Screen Pixel "Footprint" in Texture

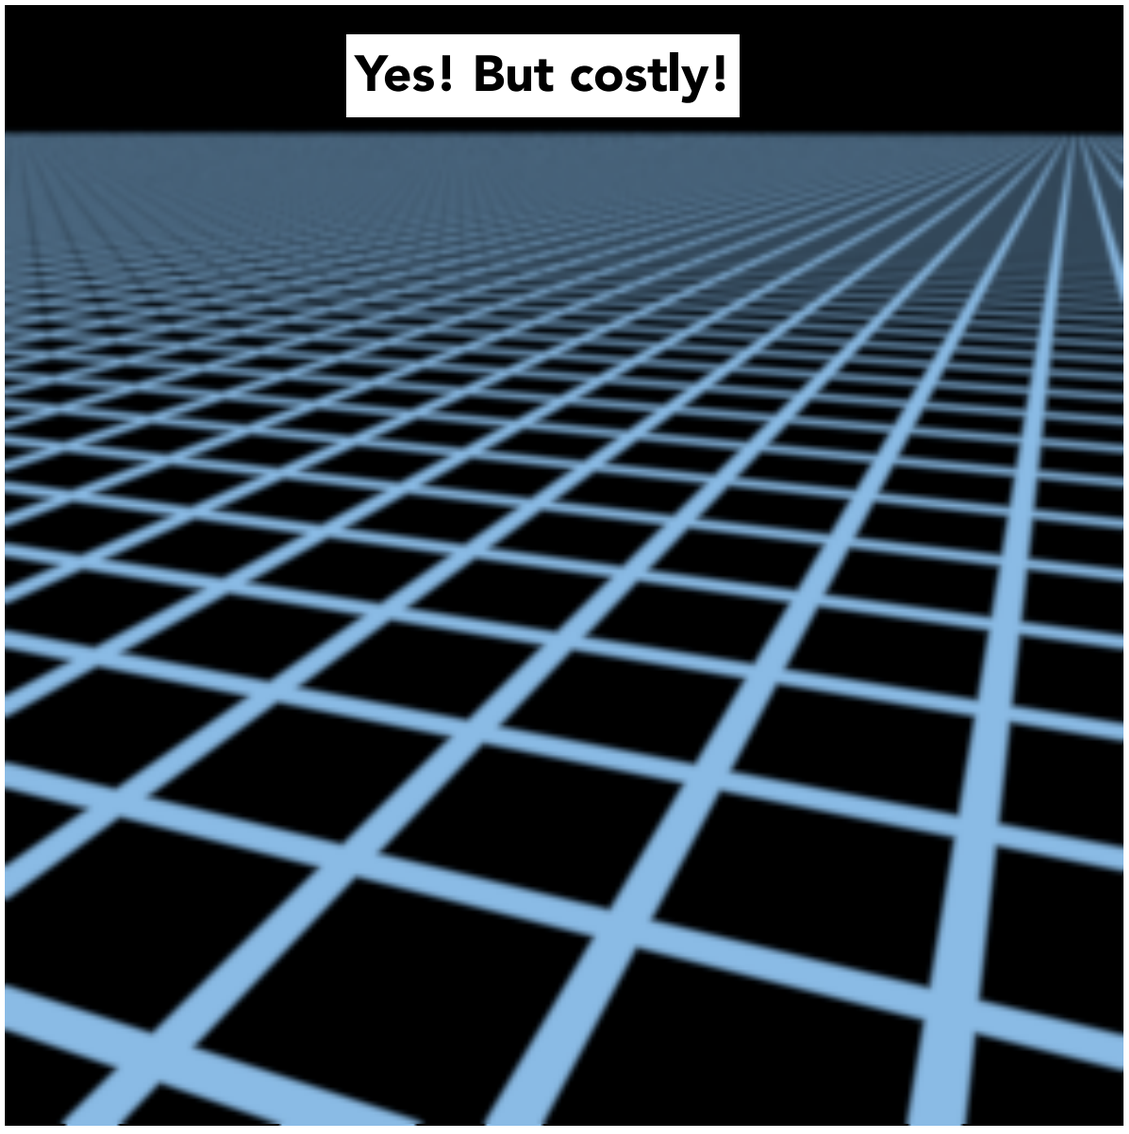


Upsampling (Magnification)

Downsampling (Minification)

Will Supersampling Do Antialiasing?





512x supersampling

Antialiasing — Supersampling?

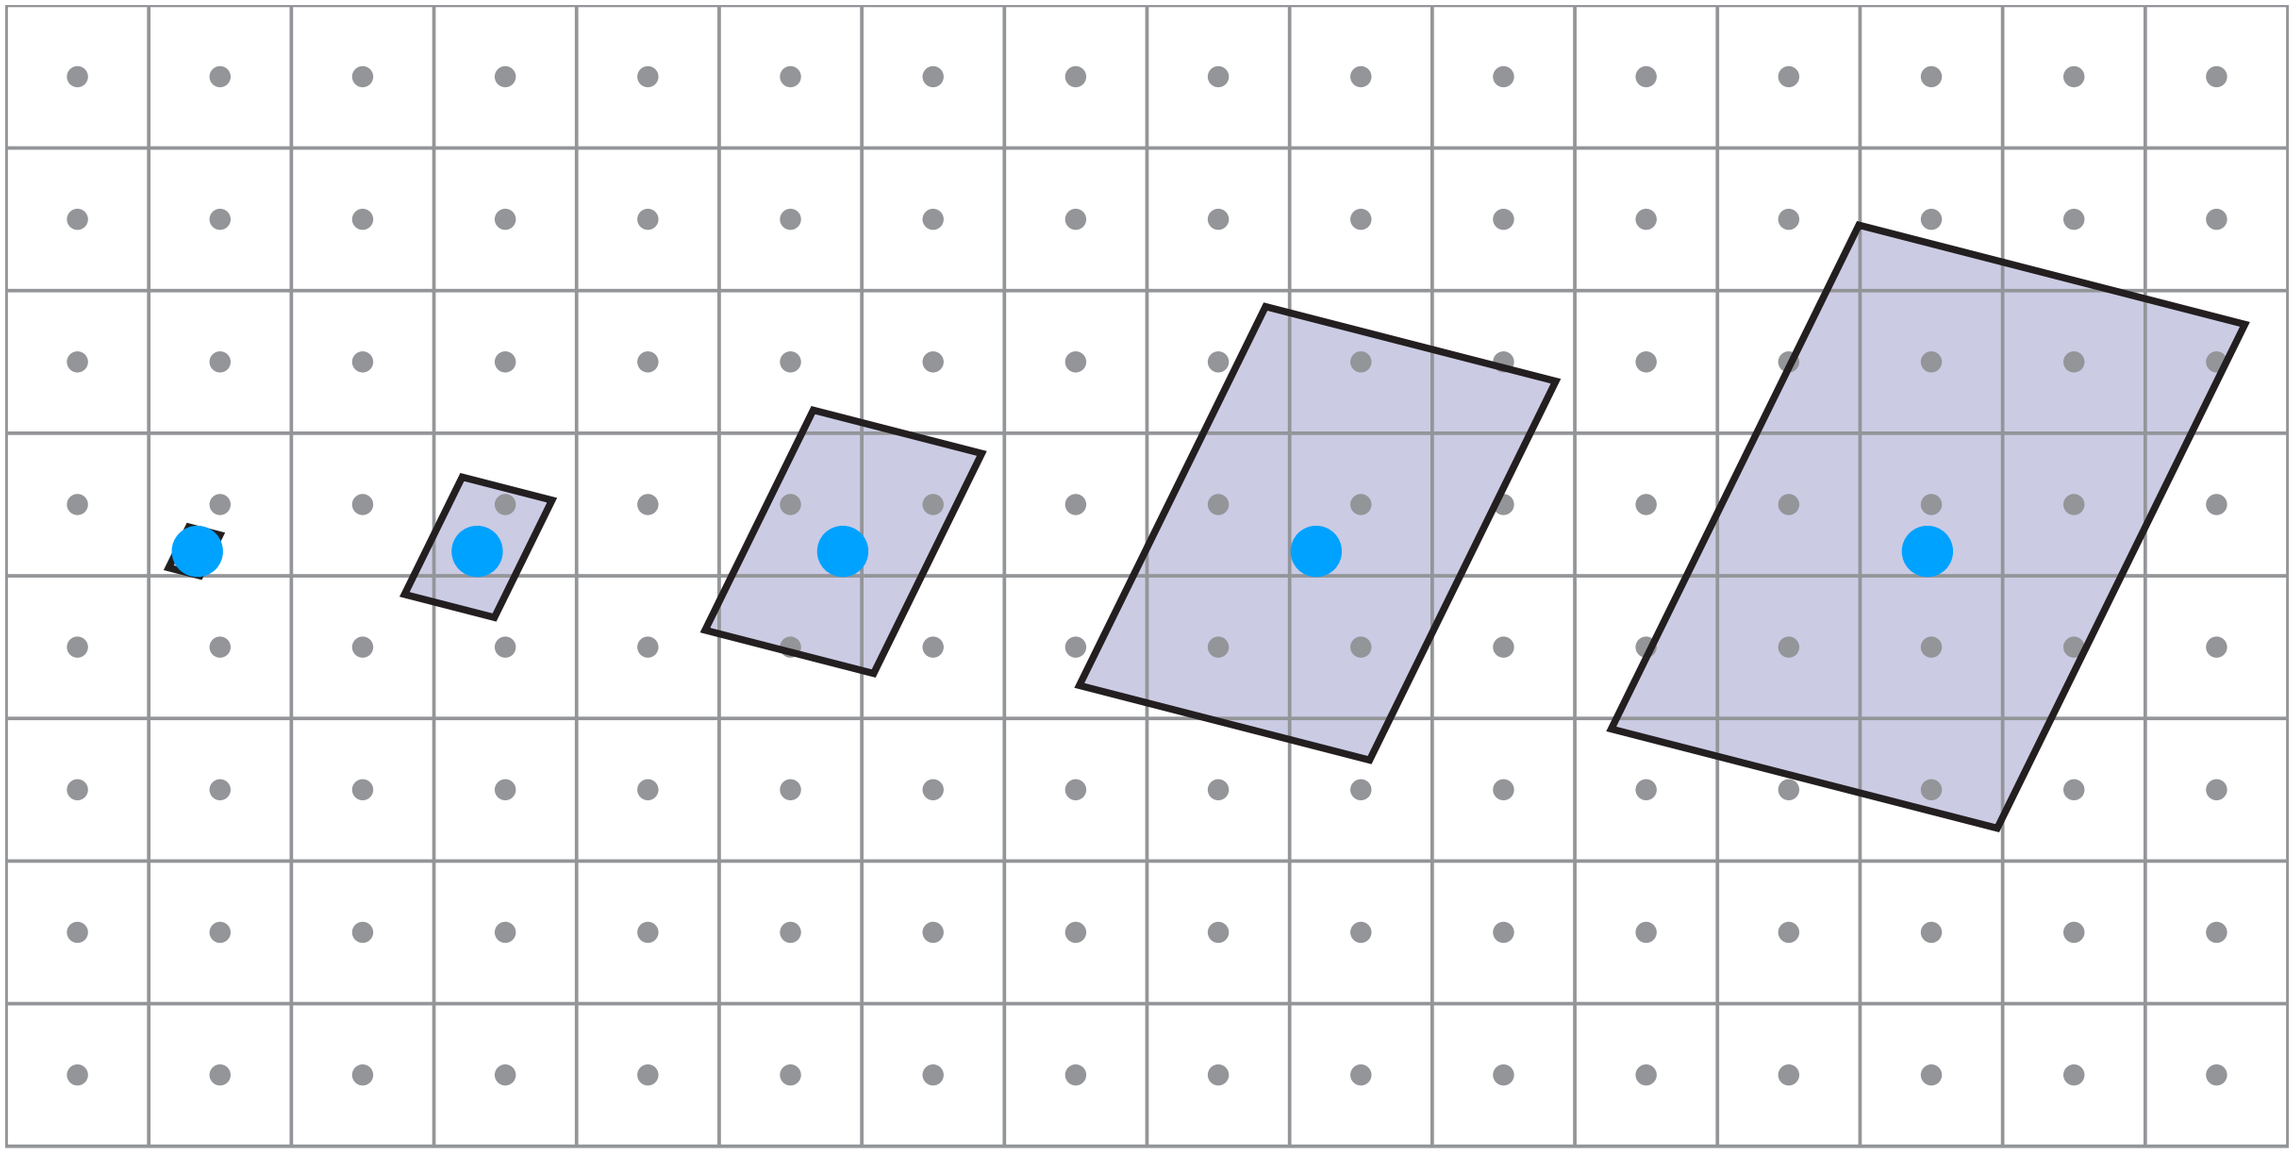
Will supersampling work?

- Yes, high quality, but costly
- When highly minified, many texels in pixel footprint
- Signal frequency too large in a pixel
- Need even higher sampling frequency

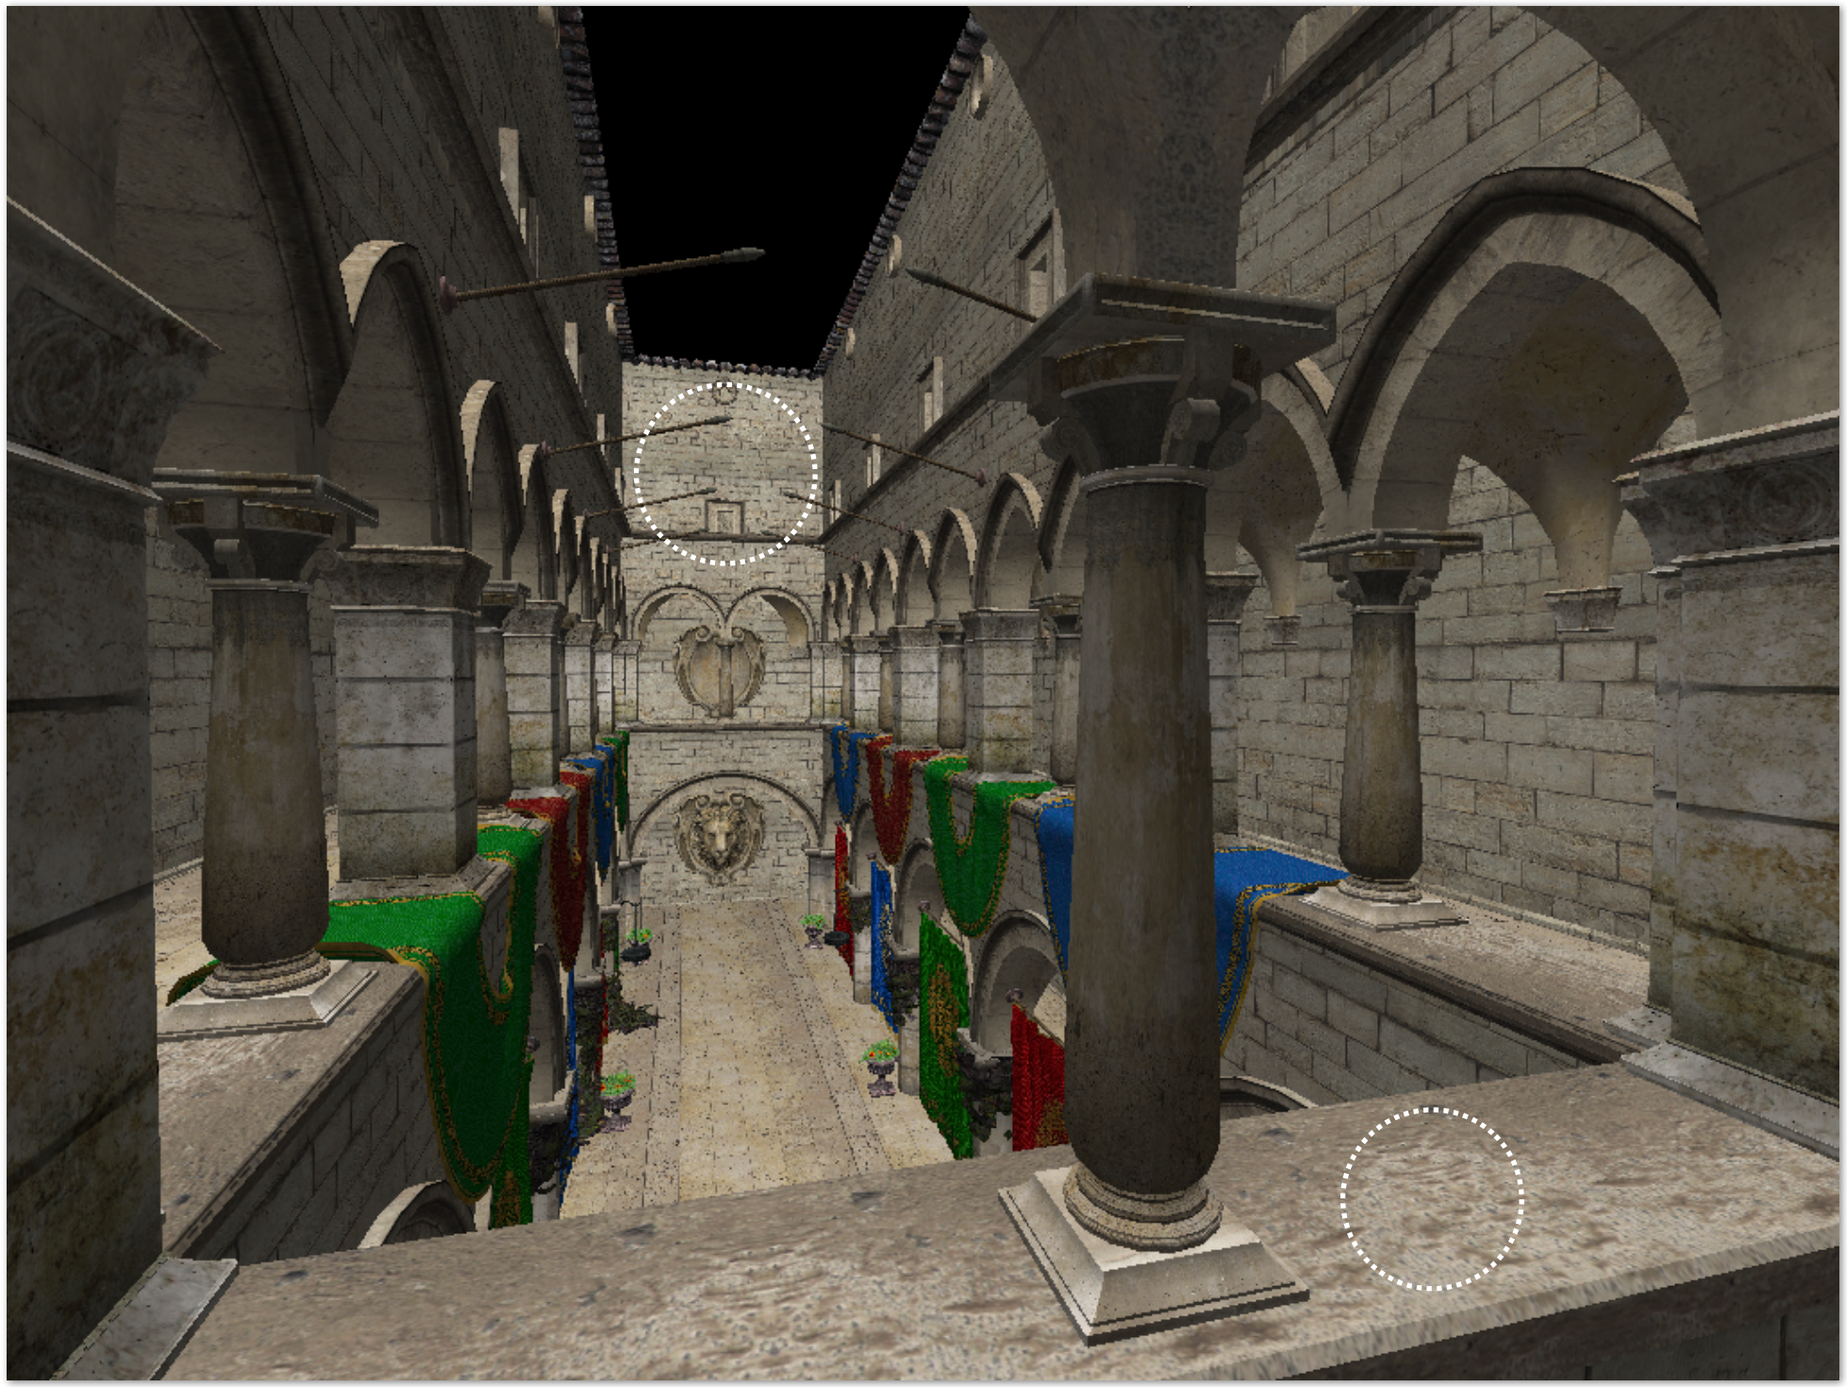
Let’s understand this problem in another way

- What if we don’t sample?
- Just need to **get the average value within a range**!

Point Query vs. (Avg.) Range Query



Different Pixels -> Different-Sized Footprints



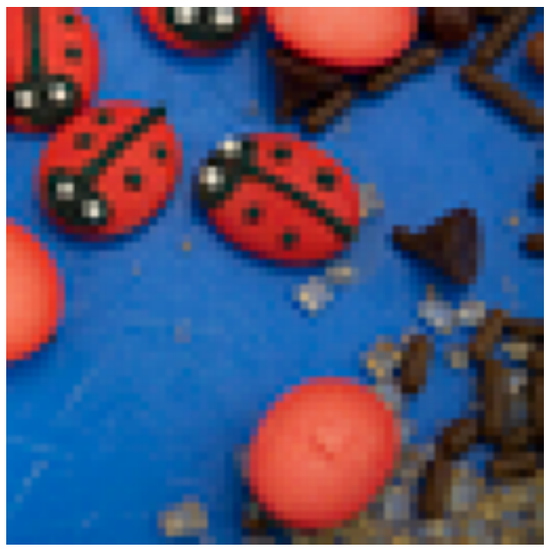
Mipmap

Allowing (fast, approx., square) range queries

Mipmap (L. Williams 83)

“Mip” comes from the Latin “multum in parvo", meaning a multitude in a small space

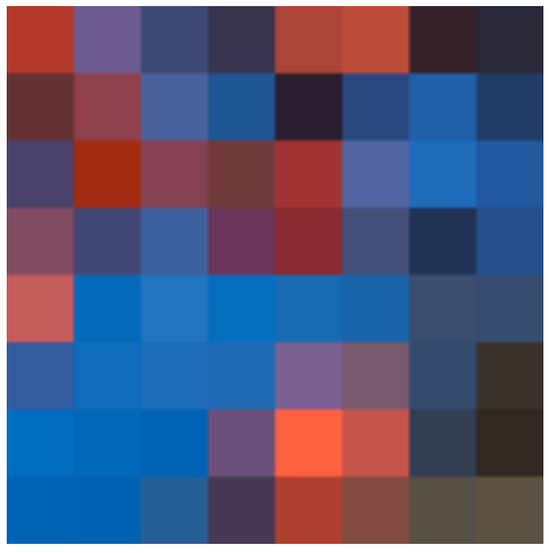
Level 0 = 128x128



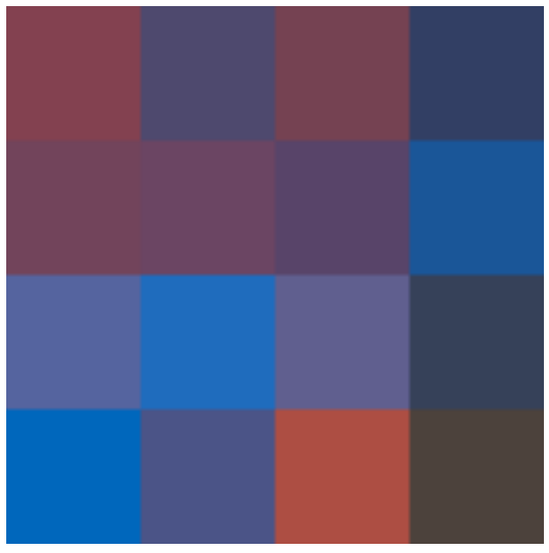
Level 1 = 64x64

Level 2 = 32x32

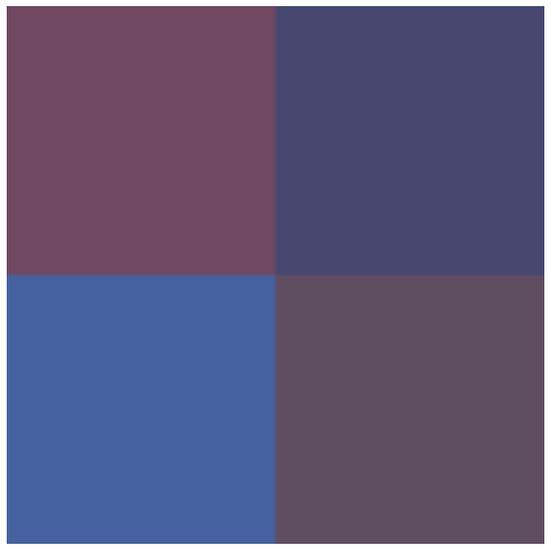
Level 3 = 16x16



Level 4 = 8x8



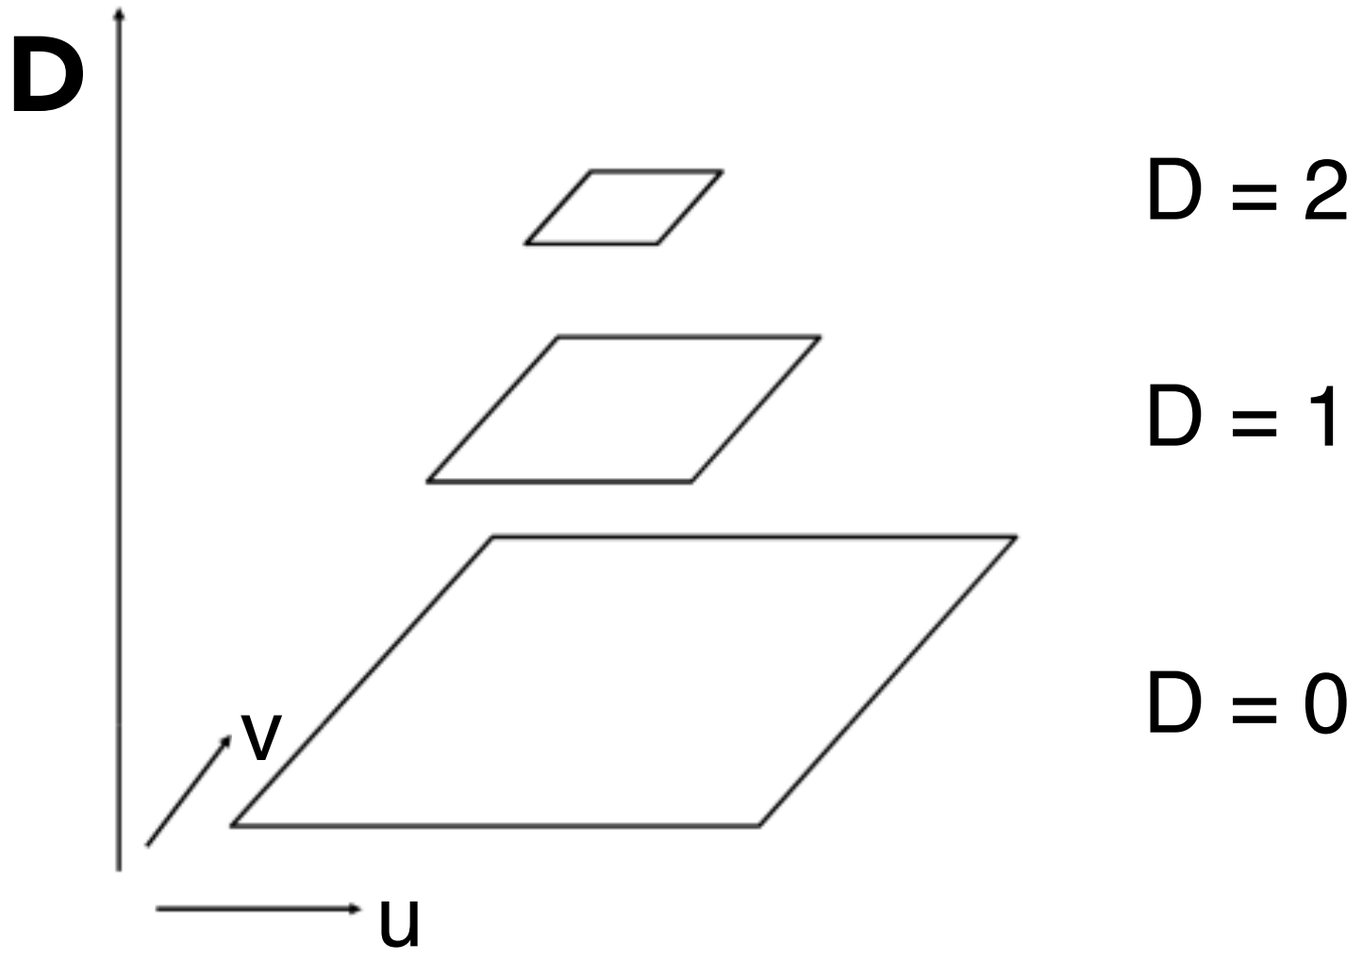
Level 5 = 4x4



Level 6 = 2x2

Level 7 = 1x1

Mipmap (L. Williams 83)

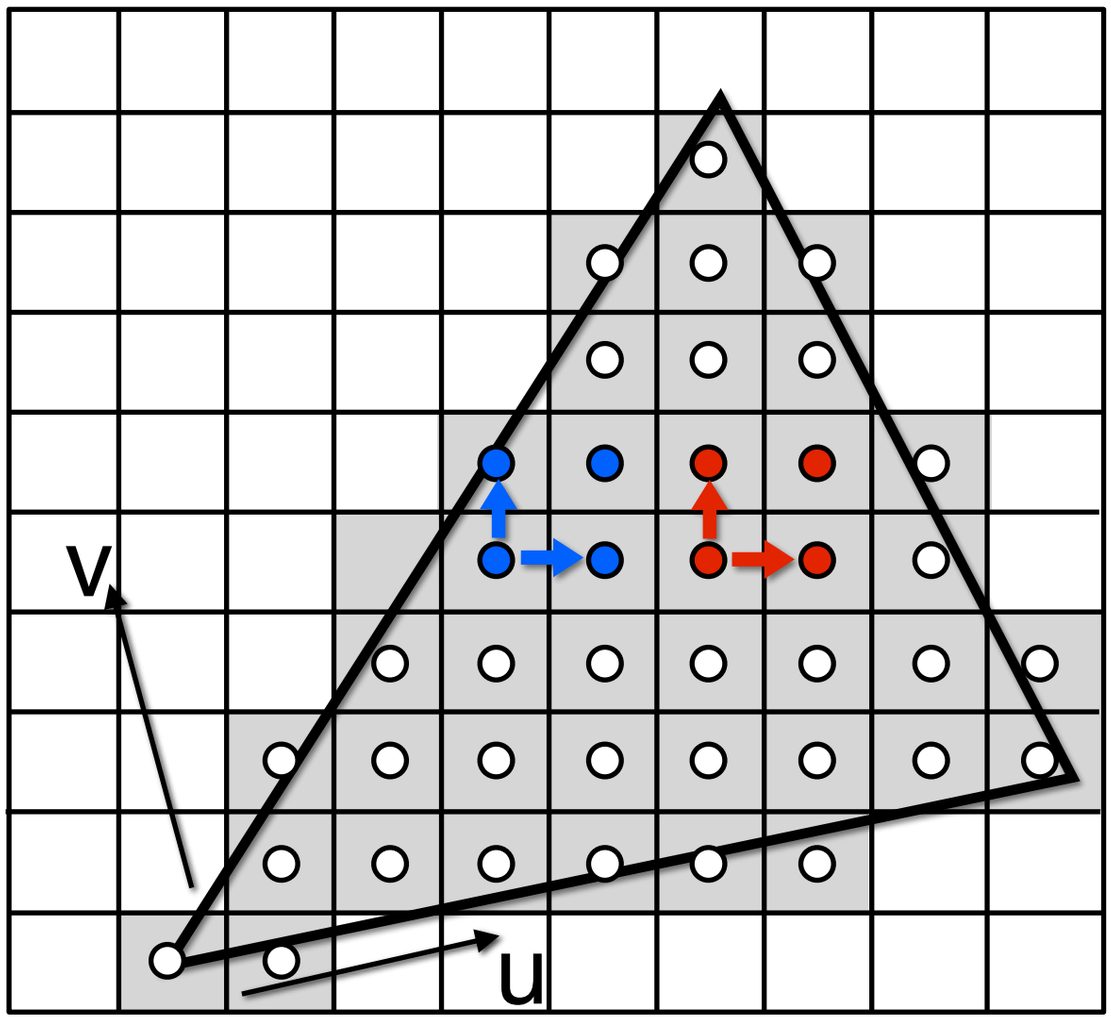


"Mip hierarchy"

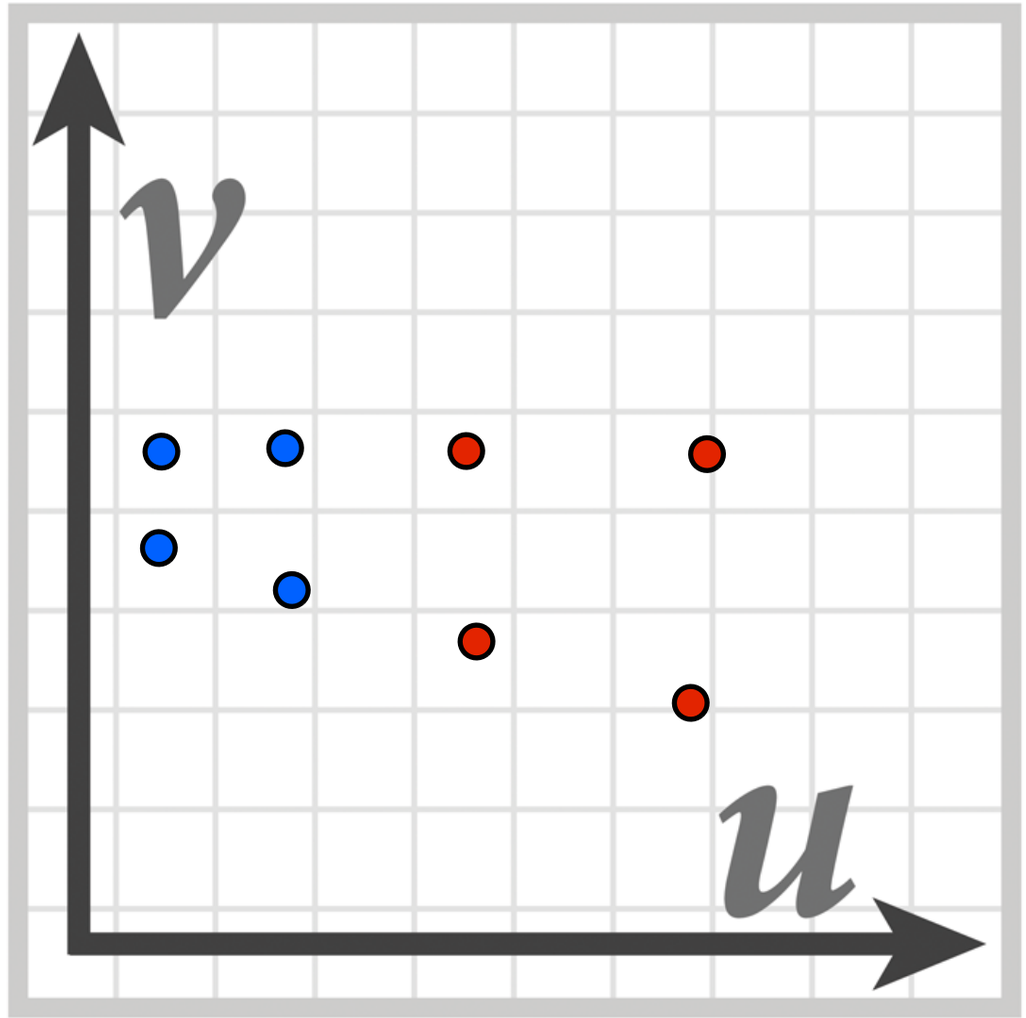
level = D

What is the storage overhead of a mipmap?

Computing Mipmap Level D



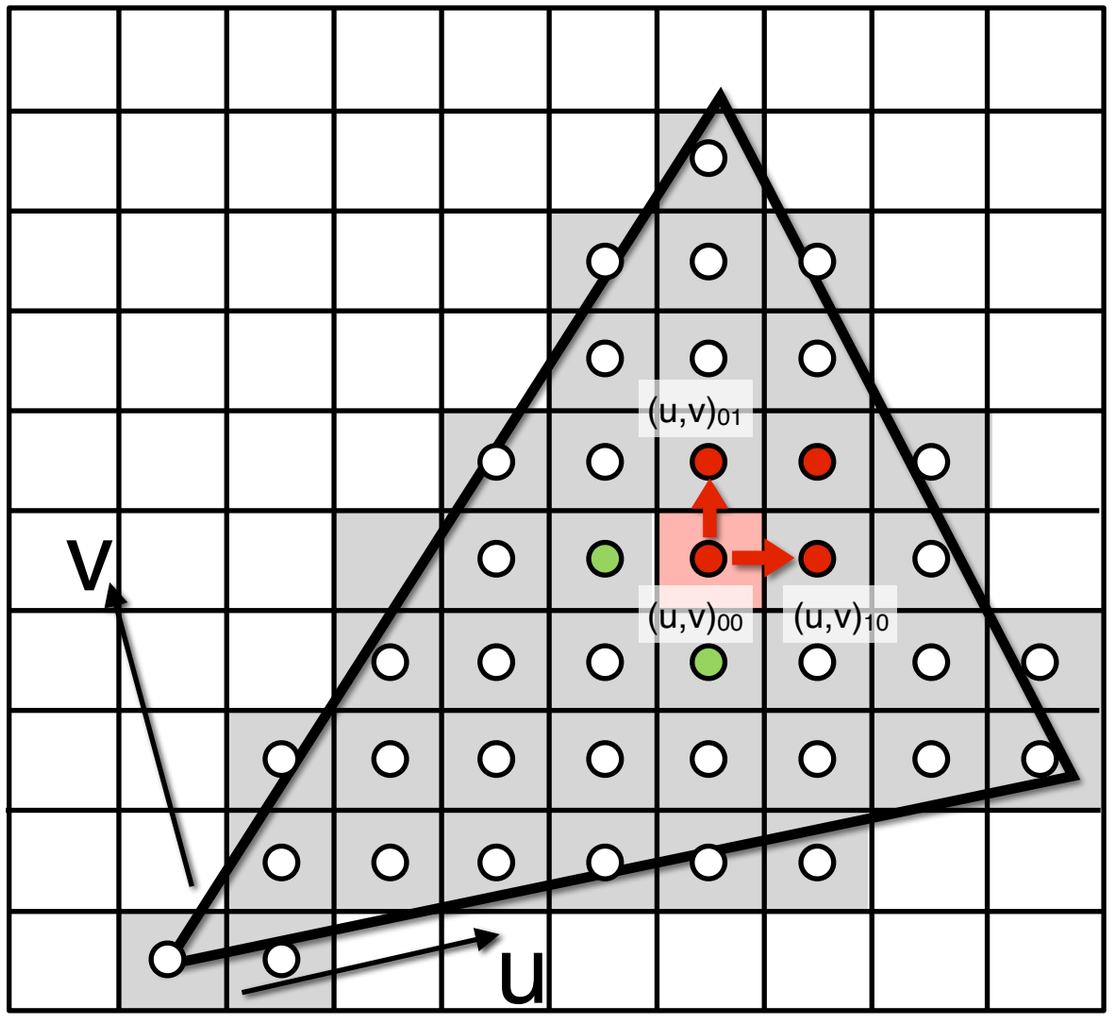
Screen space (x,y)

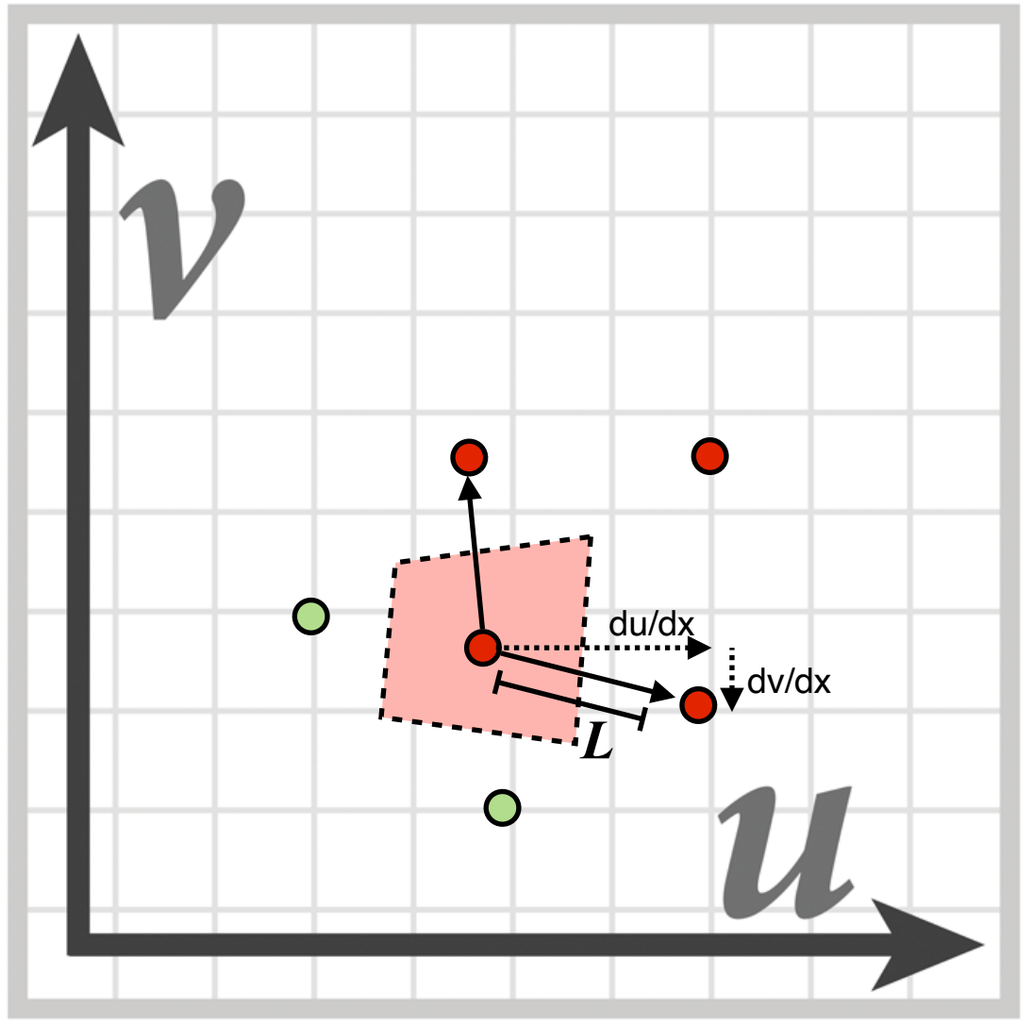


Texture space (u,v)

Estimate texture footprint using texture coordinates of neighboring screen samples

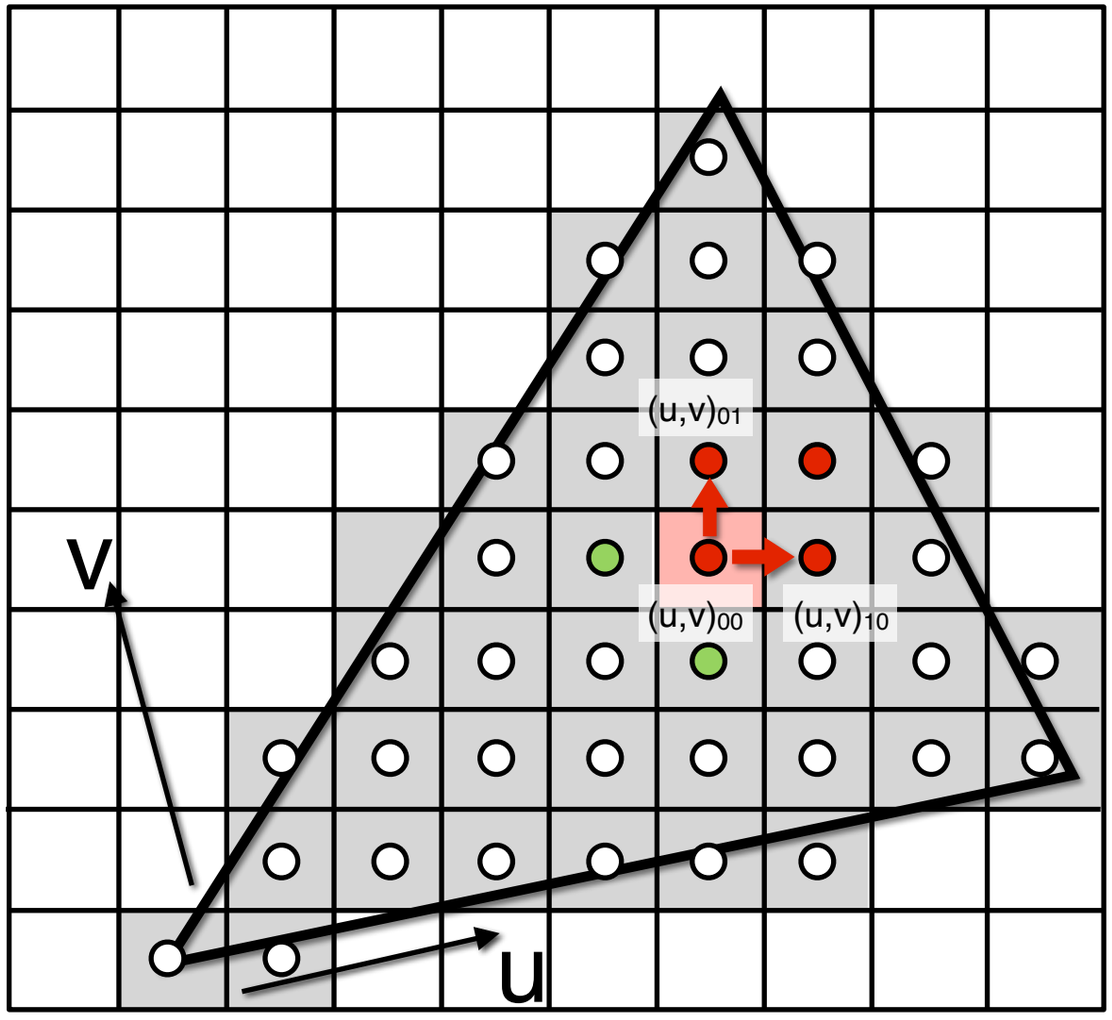
Computing Mipmap Level D

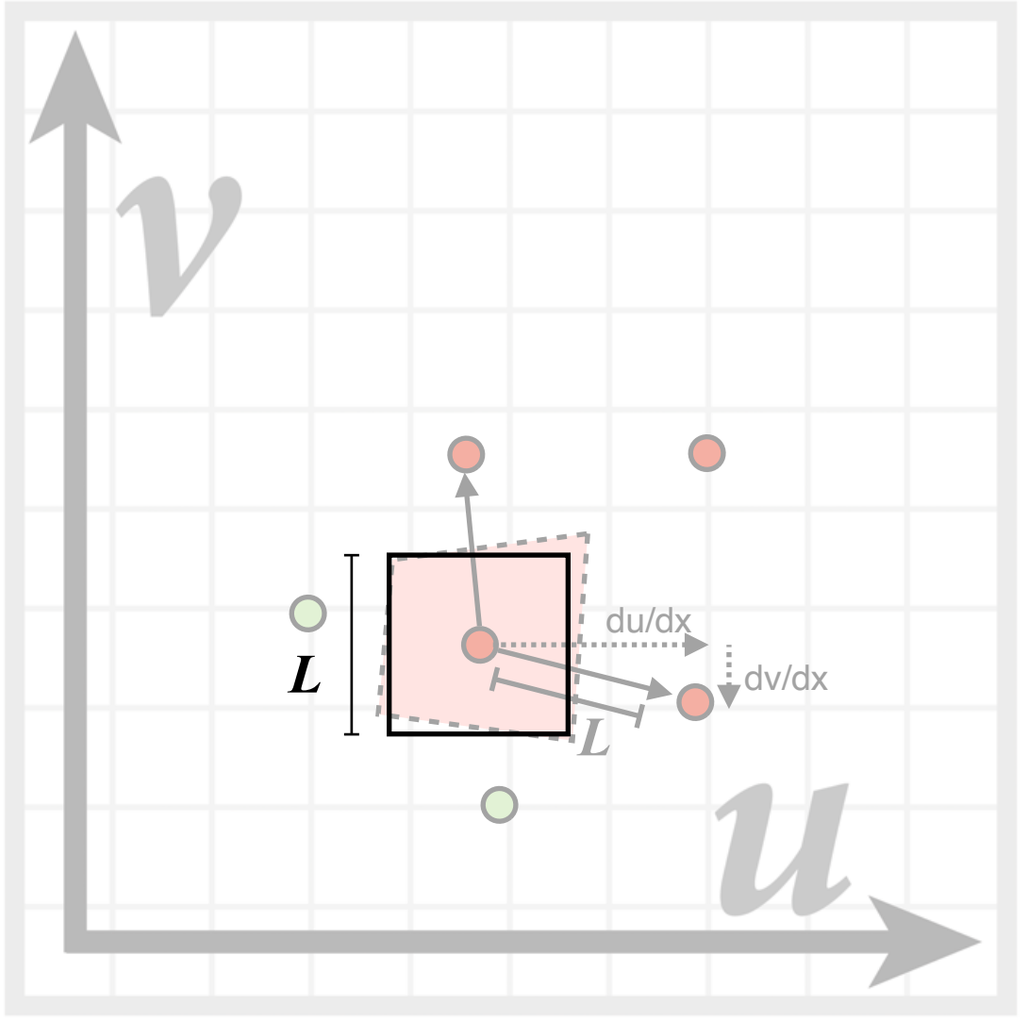




$$D = \log_2 L \qquad L = \max\left(\sqrt{\left(\frac{du}{dx}\right)^2 + \left(\frac{dv}{dx}\right)^2}, \sqrt{\left(\frac{du}{dy}\right)^2 + \left(\frac{dv}{dy}\right)^2}\right)$$

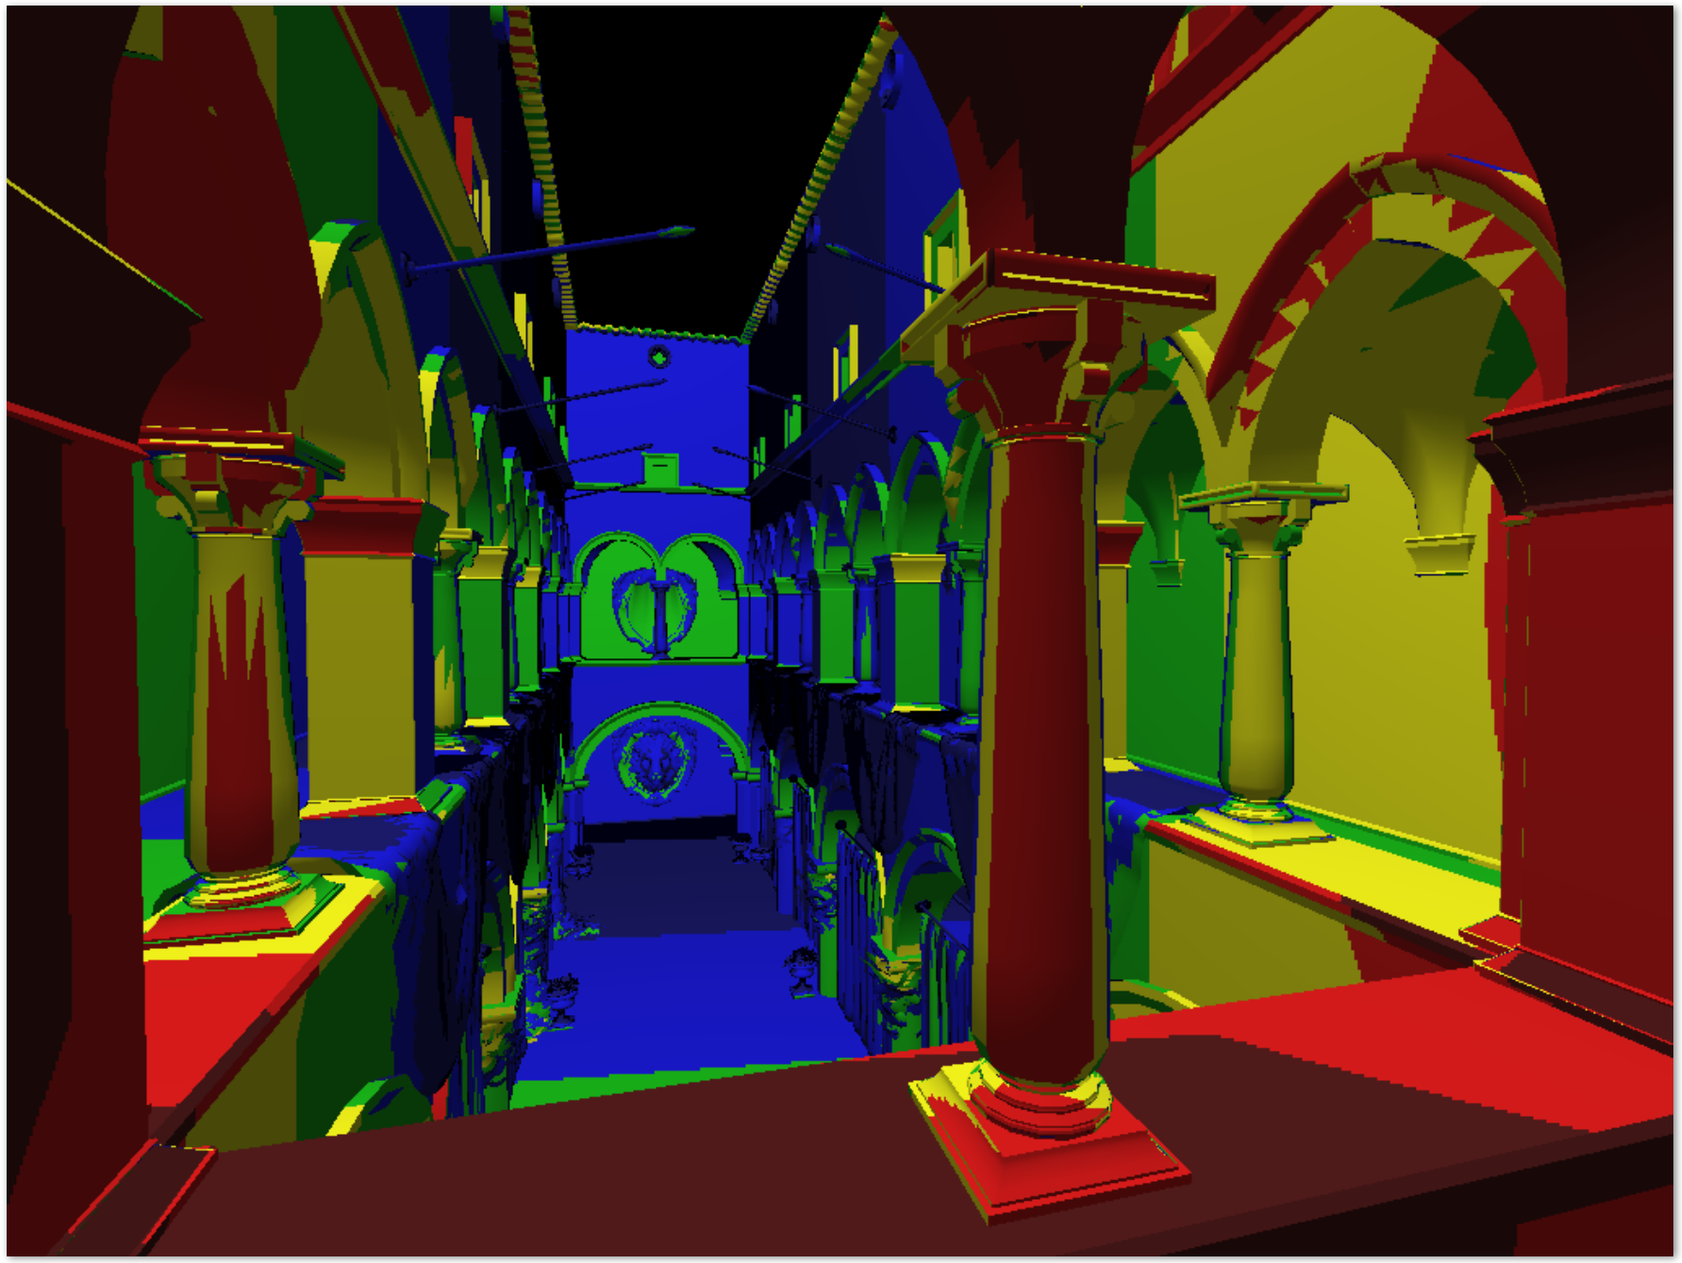
Computing Mipmap Level D





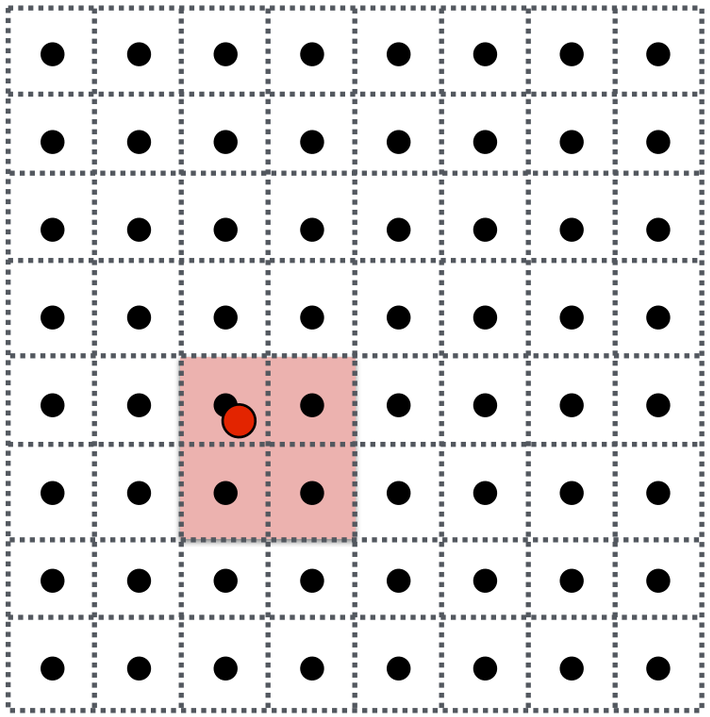
$$D = \log_2 L \qquad L = \max\left(\sqrt{\left(\frac{du}{dx}\right)^2 + \left(\frac{dv}{dx}\right)^2}, \sqrt{\left(\frac{du}{dy}\right)^2 + \left(\frac{dv}{dy}\right)^2}\right)$$

Visualization of Mipmap Level

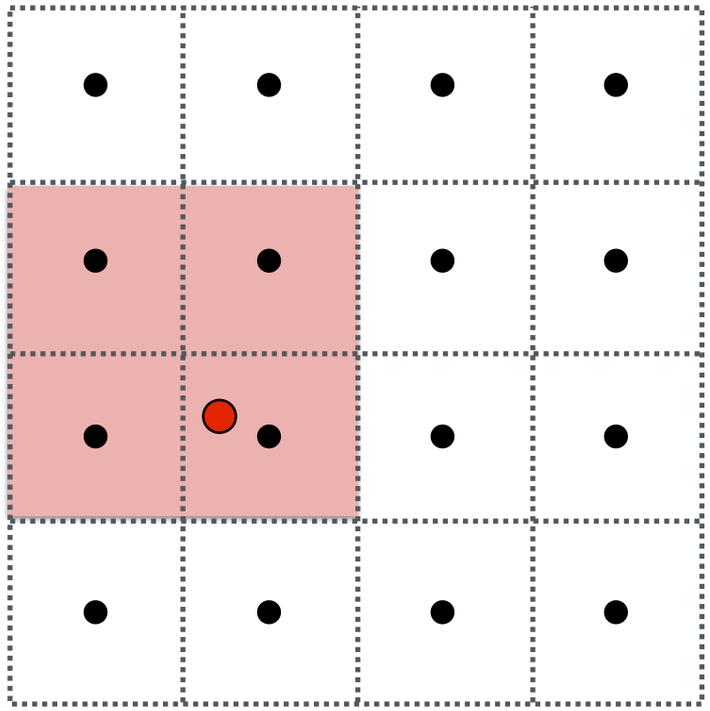


D rounded to nearest integer level

Trilinear Interpolation



Mipmap Level D



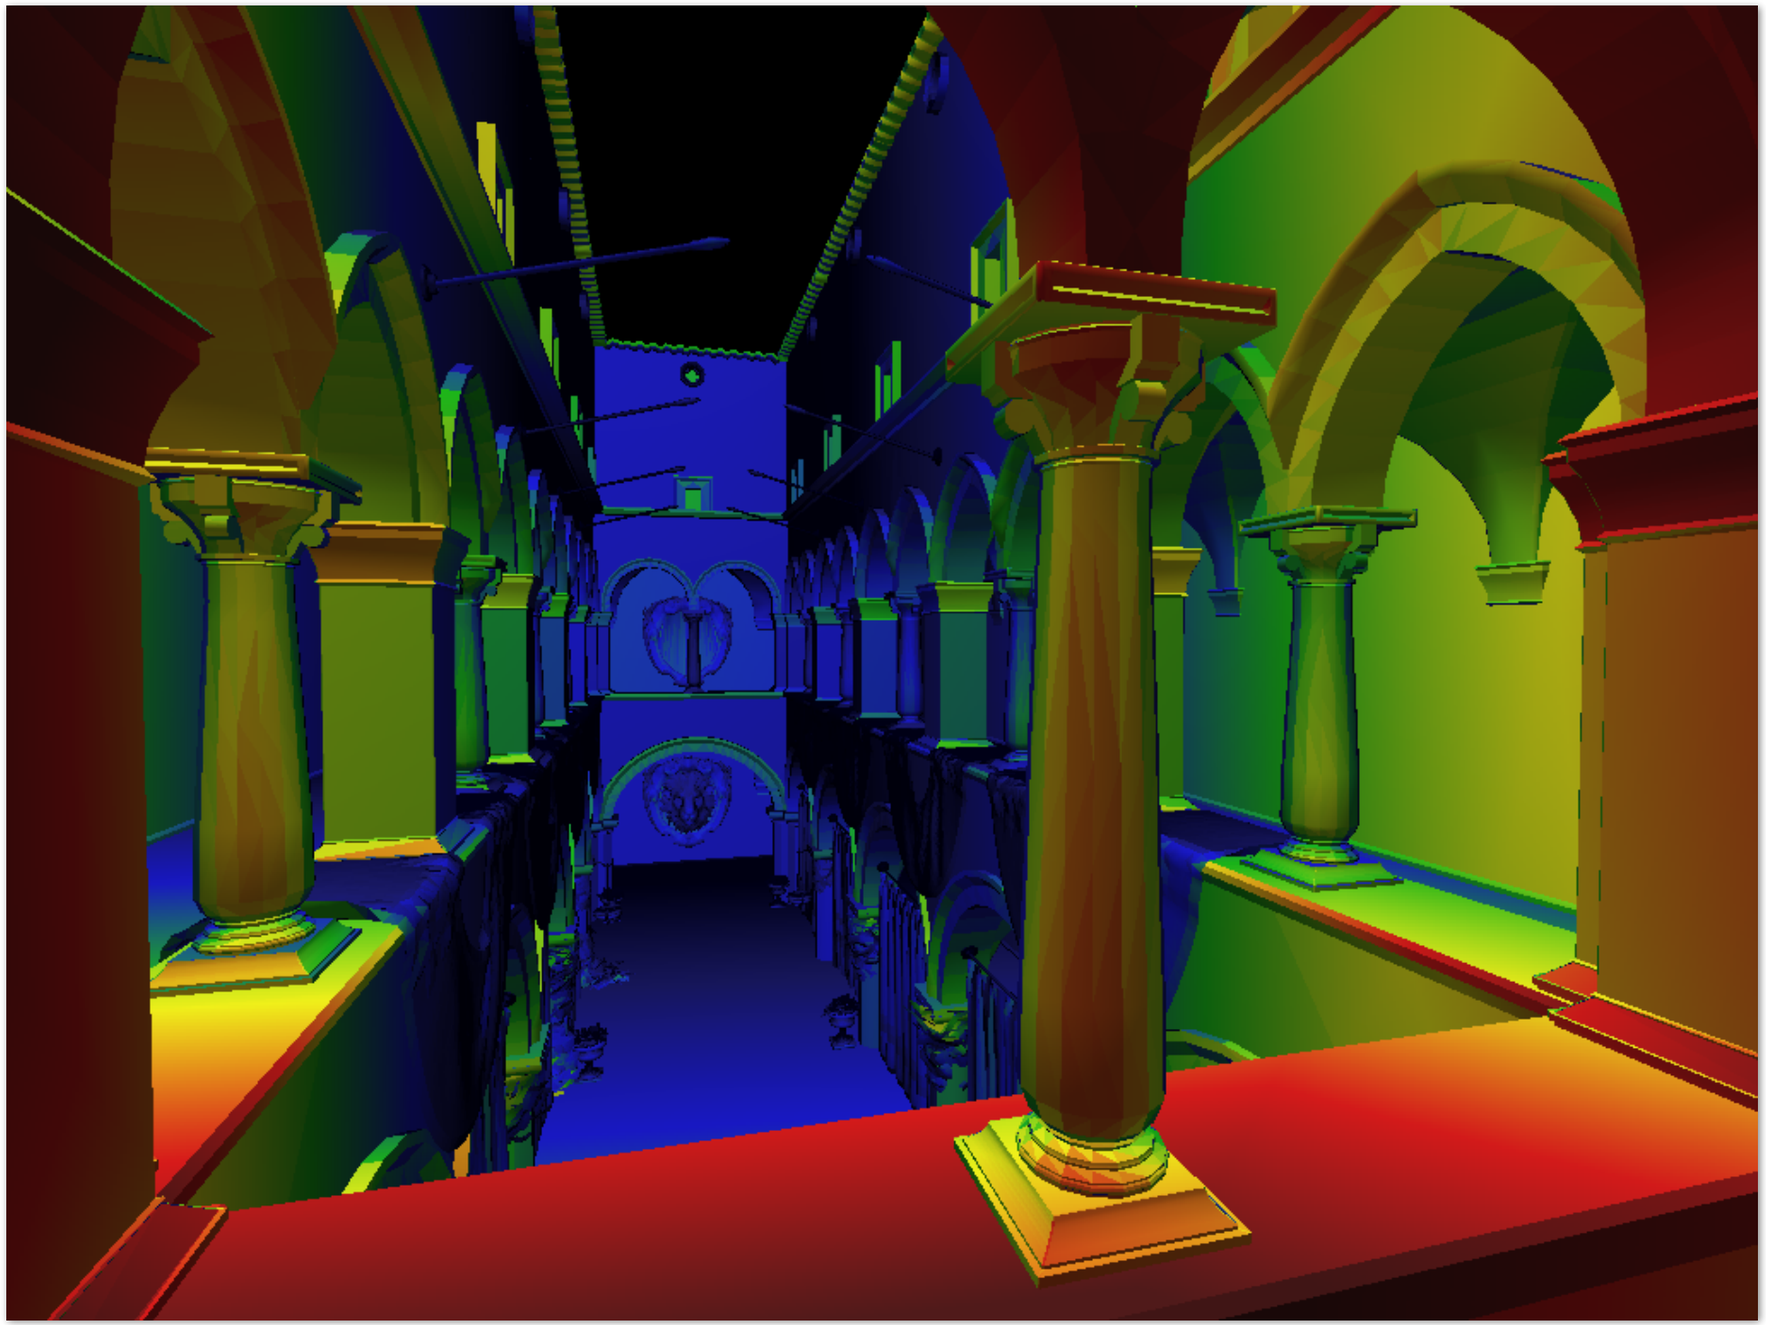
Mipmap Level D+1

Bilinear result

Bilinear result

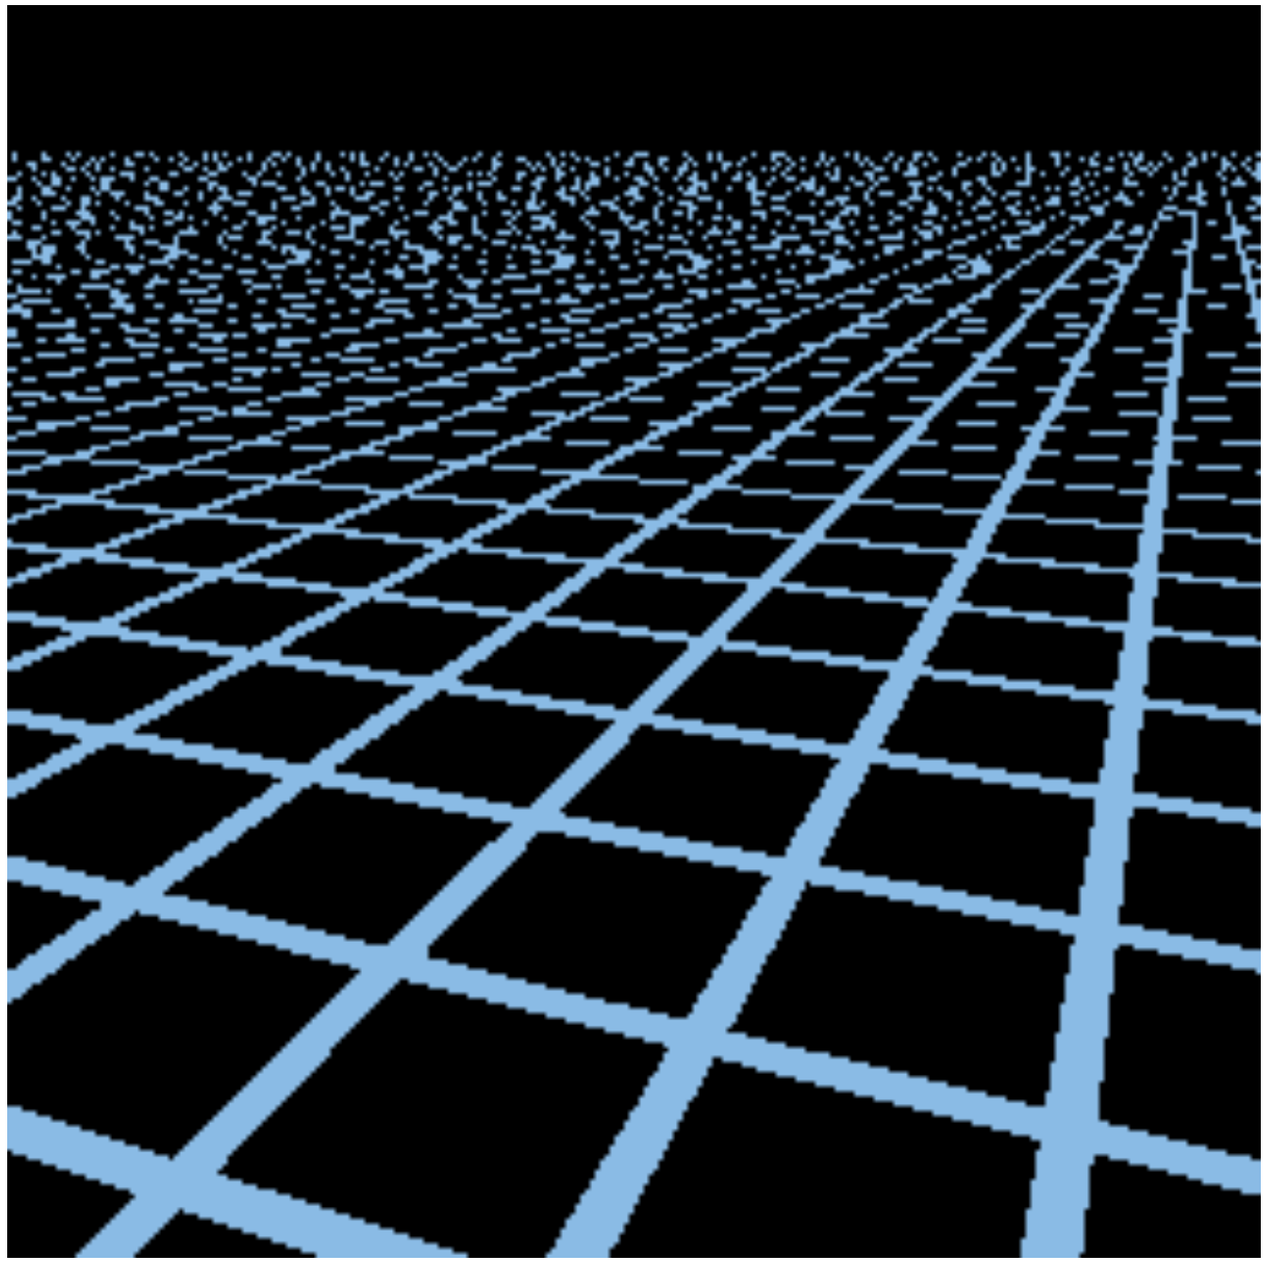
Linear interpolation based on continuous D value

Visualization of Mipmap Level



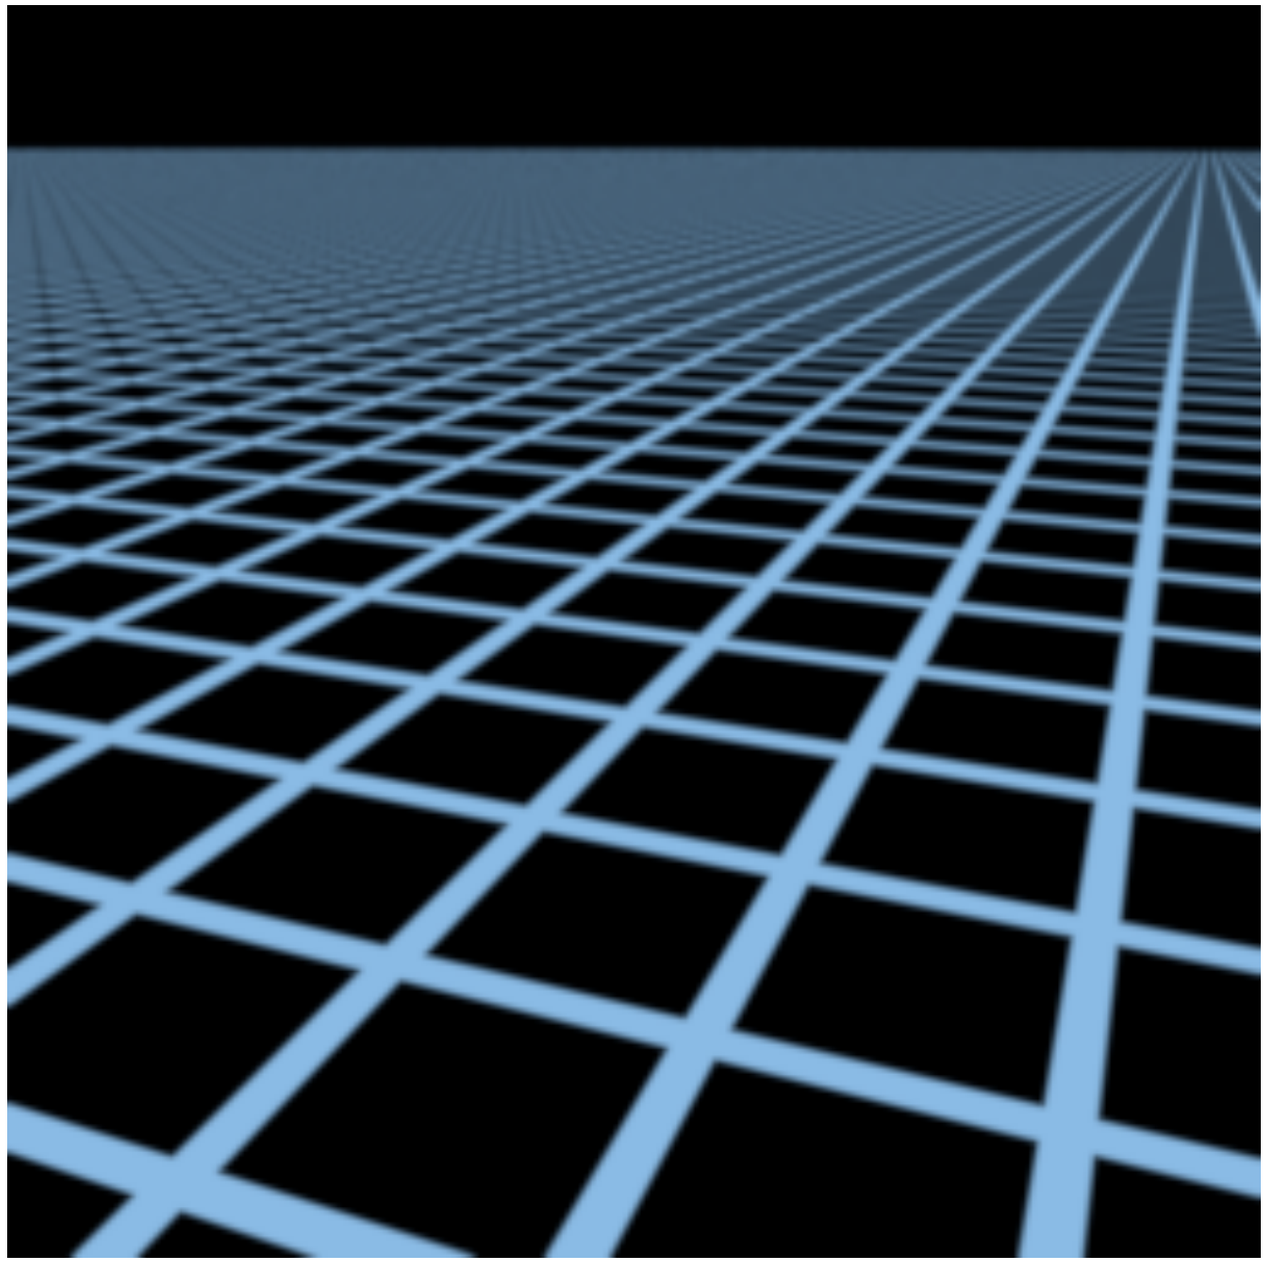
Trilinear filtering: visualization of continuous D

Mipmap Limitations



Point sampling

Mipmap Limitations

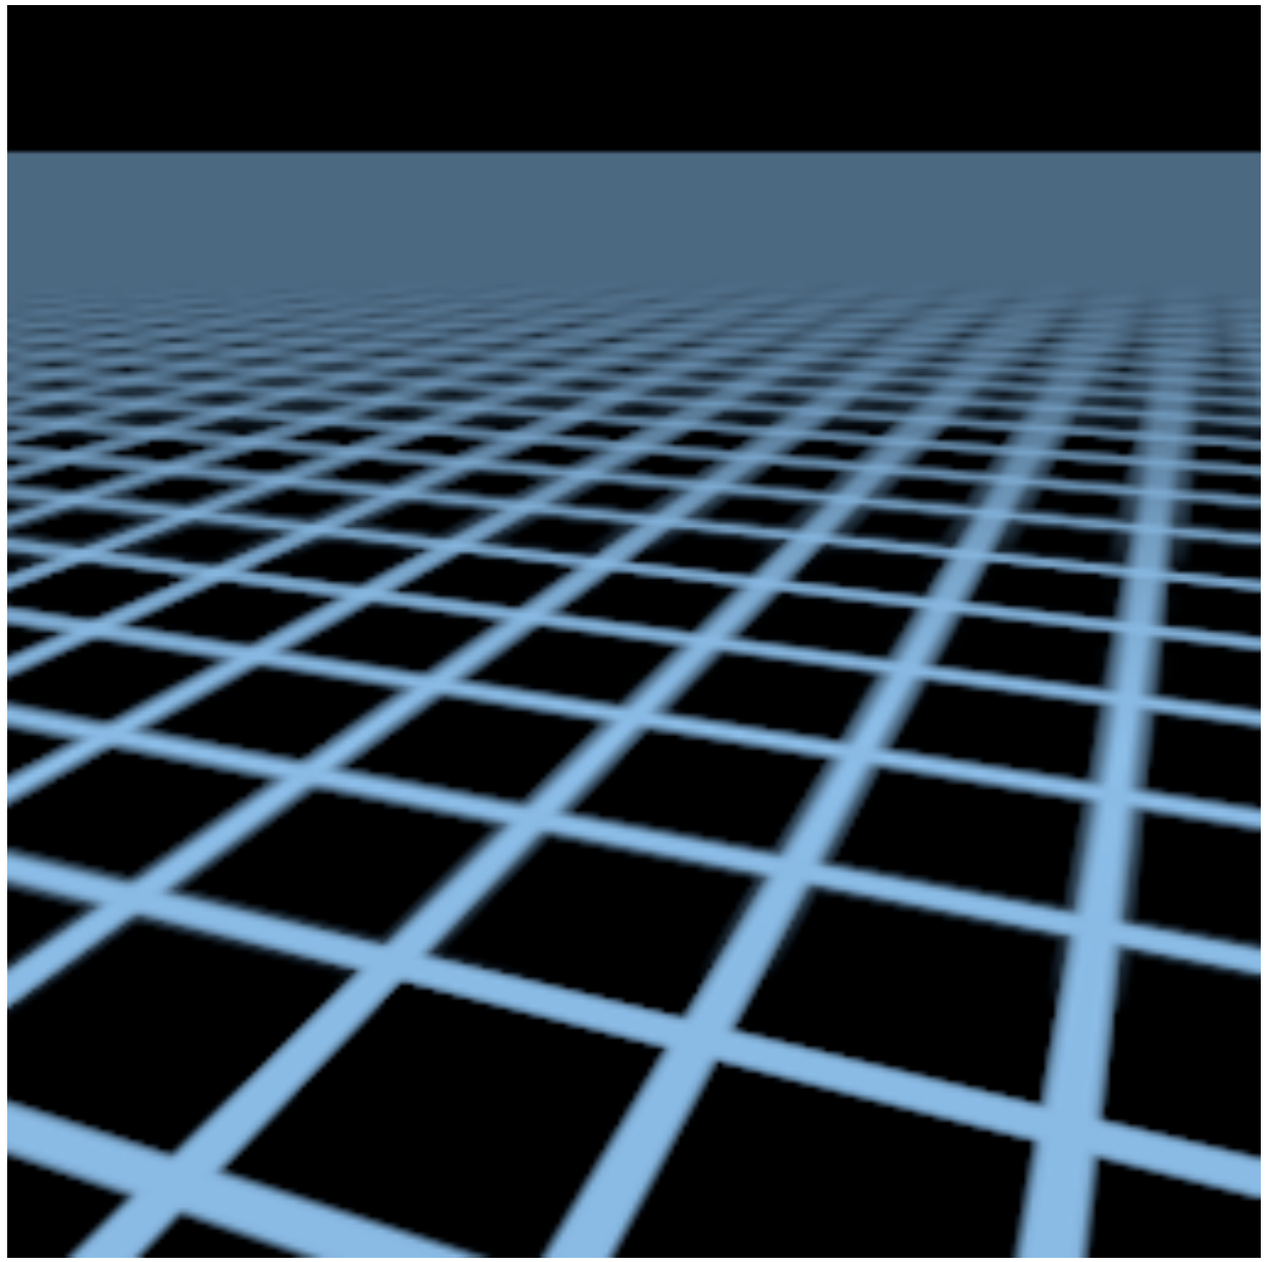


Supersampling 512x (assume this is correct)

Mipmap Limitations

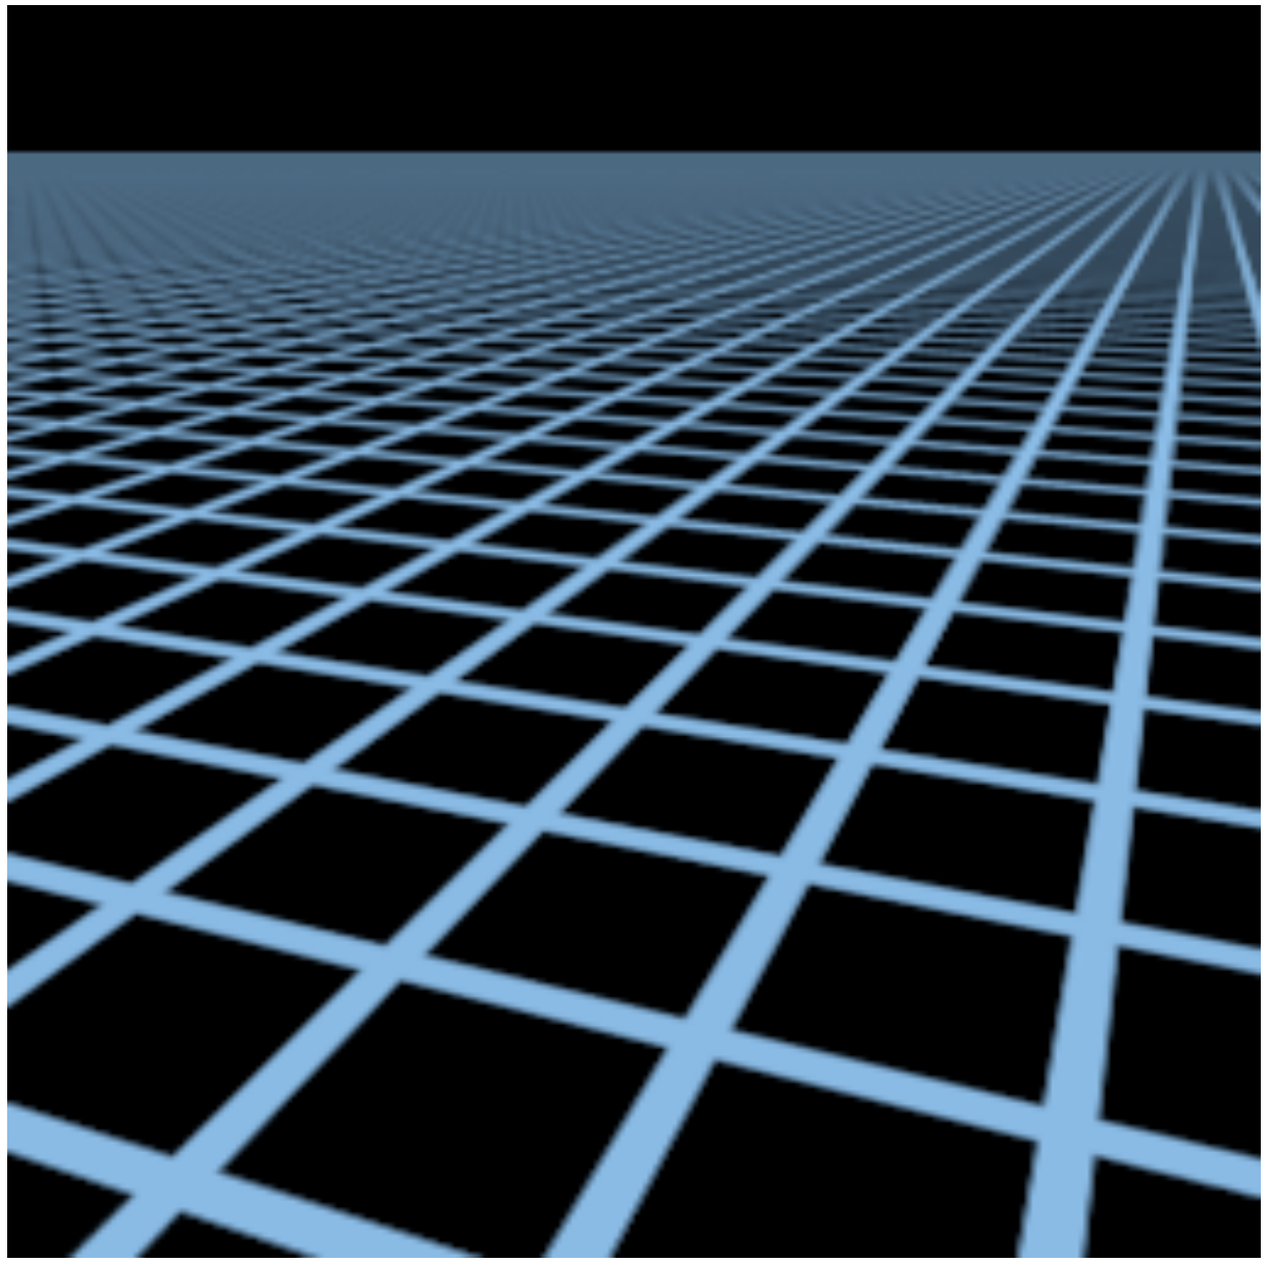
Overblur

Why?



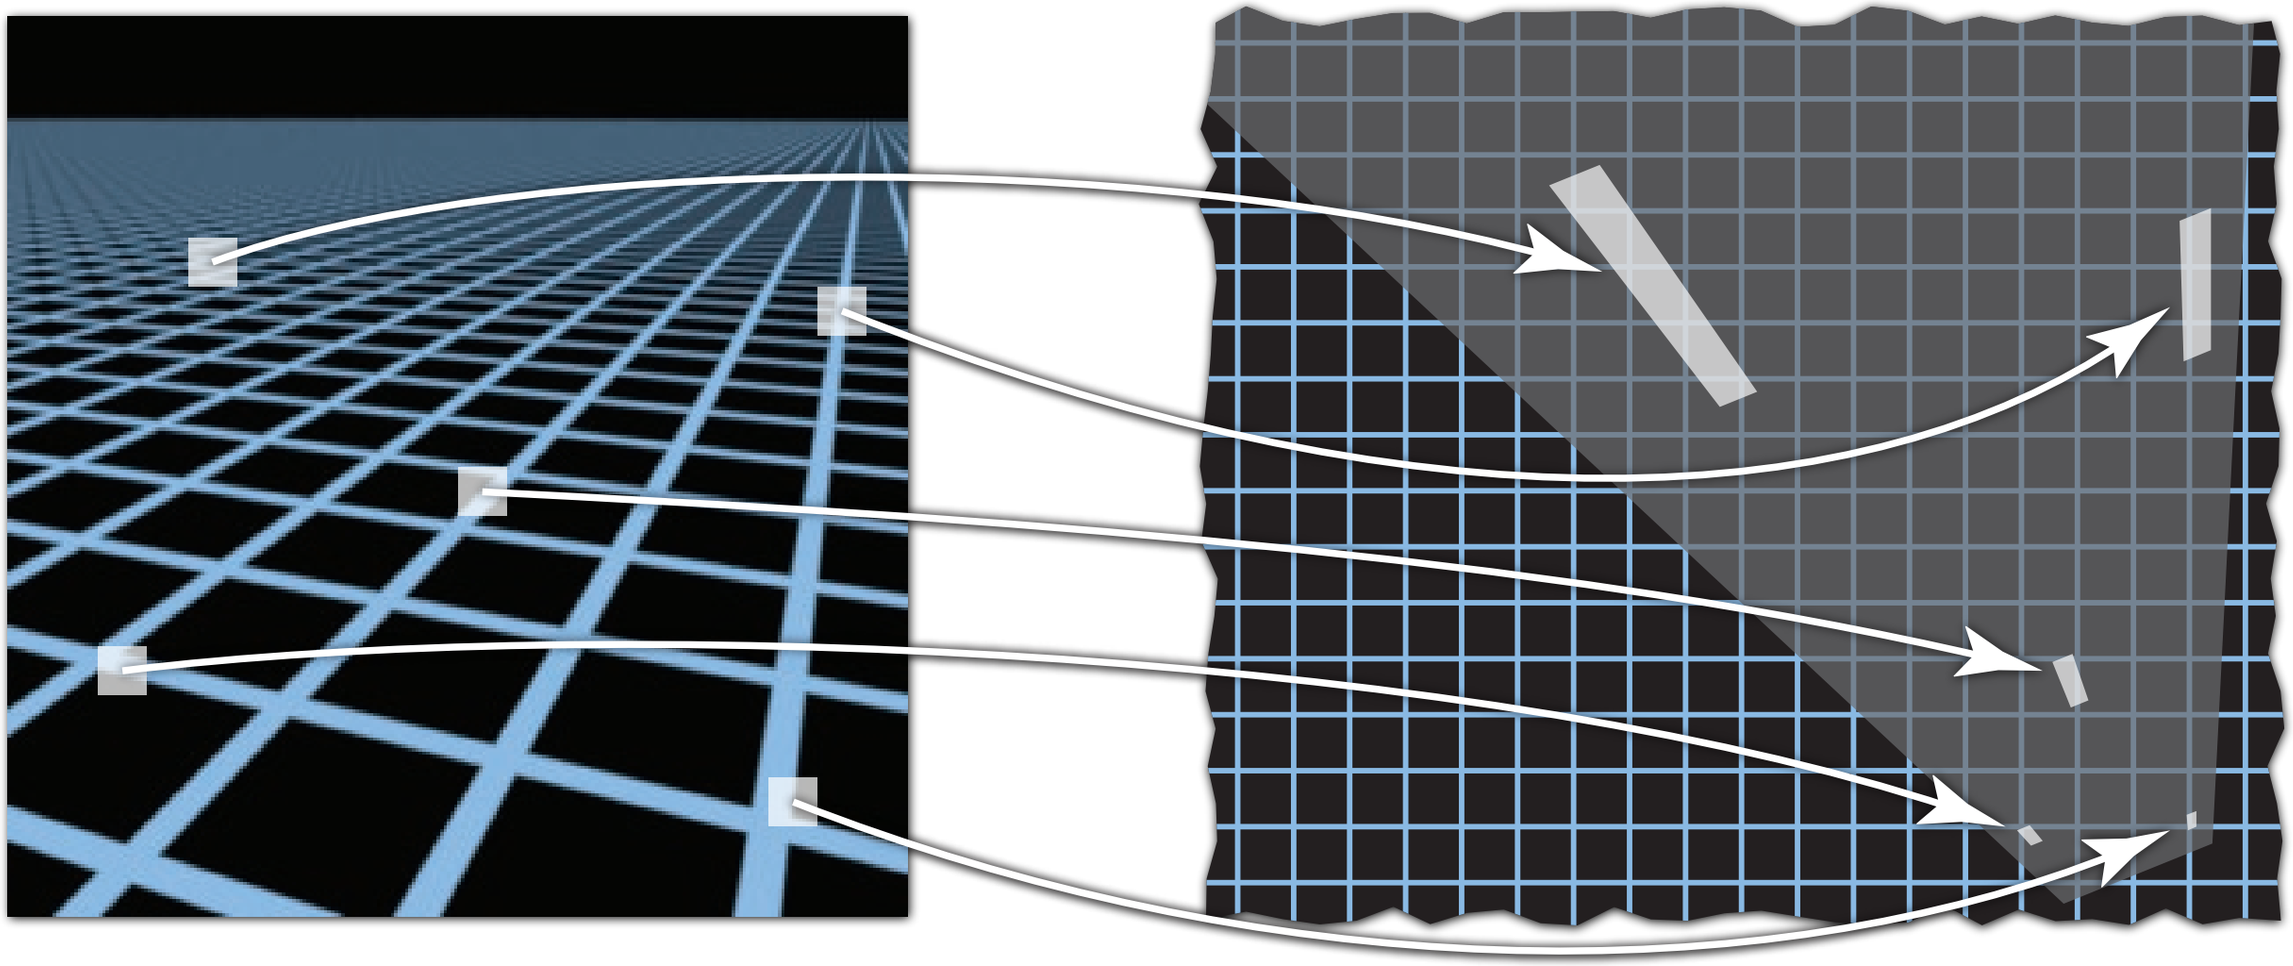
Mipmap trilinear sampling

Anisotropic Filtering



Better than Mipmap!

Irregular Pixel Footprint in Texture



Screen space

Texture space

Anisotropic Filtering

Ripmaps and summed area tables

- Can look up **axis-aligned rectangular zones**
- Diagonal footprints still a problem

Wikipedia

Anisotropic Filtering

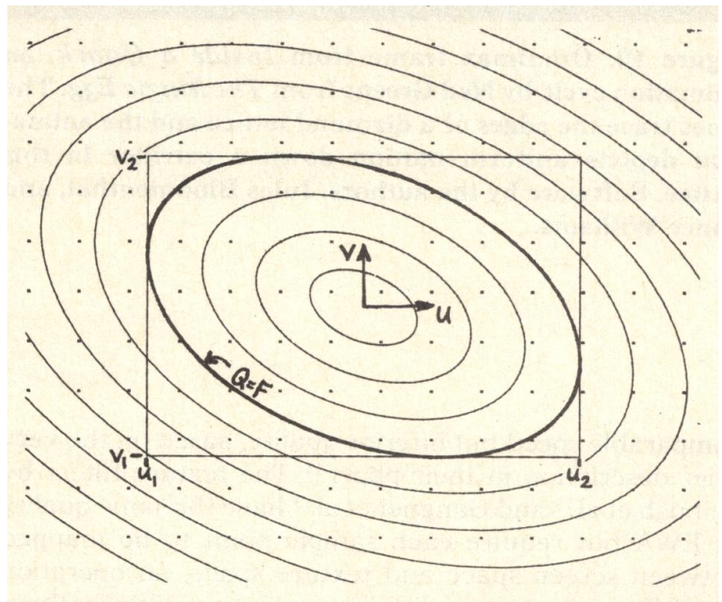
Ripmaps and summed area tables

- Can look up axis-aligned rectangular zones
- Diagonal footprints still a problem

Wikipedia

EWA filtering

- Use multiple lookups
- Weighted average
- Mipmap hierarchy still helps
- Can handle irregular footprints



Greene & Heckbert ‘86

Thank you!

(And thank Prof. Ravi Ramamoorthi and Prof. Ren Ng for many of the slides!)
